Safety Information

WARNING!

Potential Shock Hazard

Always follow basic safety precautions when using this product to reduce risk of injury from fire or electric shock.

1. Read and understand all instructions in the user guide.
2. Observe all warnings and instructions marked on the product.
3. Use only a grounded electrical outlet when connecting the HP LaserJet 2500 printer to a power source. If you don't know whether the outlet is grounded, check with a qualified electrician.
4. Do not touch the contacts on the end of any of the sockets on the HP LaserJet 2500 printer. Replace damaged cords immediately.
5. Unplug this product from wall outlets before cleaning.
6. Do not install or use this product near water or when you are wet.
7. Install the product securely on a stable surface.
8. Install the product in a protected location where no one can step on or trip over the power cord and the power cord will not be damaged.
9. If the product does not operate normally, see the online user guide.
10. Refer all servicing questions to qualified personnel.

Information regarding FCC Class B, Parts 15 and 68 requirements can be found in the user guide.

Introduction

The HP Color LaserJet 2500 series printer is a four-color laser printer that prints at 16 pages per minute (ppm) in black and white, and 4 ppm in color.

- **Trays**—The printer comes with a tray 1 (multipurpose tray) that holds up to 125 sheets of various print media or 10 envelopes. The HP Color LaserJet 2500L (base model) is compatible with optional tray 2 (250-sheet tray) for standard sizes of paper and optional tray 3 (500-sheet tray) for A4 and letter sizes. (Optional tray 2 must be installed in order to install optional tray 3.)
- **Connectivity**—The printer provides parallel and universal serial bus (USB) ports for connectivity. The printer also contains an enhanced input/output (EIO) slot for installing an optional HP Jetdirect print server card.

Note

The parallel and USB ports cannot be connected at the same time.

- **Memory**—The printer contains three dual inline memory module (DIMM) slots. The standard 64-megabyte (MB) random access memory (RAM) DIMM resides in one of the slots. The printer memory can be expanded to a total of 320 MB using 32-, 64-, or 128-MB RAM DIMMs. A language font DIMM can be installed in one of the DIMM slots.

Product configurations

HP Color LaserJet 2500L

The HP Color LaserJet 2500L printer comes with tray 1 (multipurpose tray), and is compatible with optional trays 2 and 3.

HP Color LaserJet 2500

The HP Color LaserJet 2500 printer comes with tray 1 and tray 2, and is compatible with optional tray 3.

HP Color LaserJet 2500n

- The HP Color LaserJet 2500n printer comes with tray 1 and tray 2, and is compatible with optional tray 3.
- The printer comes with an HP Jetdirect 615n print server card for connecting to a 10/100Base-T network.

HP Color LaserJet 2500tn

- The HP Color LaserJet 2500tn printer comes with tray 1, tray 2, and tray 3.
- The printer comes with an HP Jetdirect 615n print server card for connecting to a 10/100Base-T network.

Note

Because tray 2 and tray 3 are not included with all models, they are referred to as optional tray 2 and optional tray 3 in this documentation.

Product specifications

Table 1. Product features

Category	Feature
Color printing	<ul style="list-style-type: none"> Capable of laser printing in full color using the four process colors: cyan, magenta, yellow, and black.
Fast print speed	<ul style="list-style-type: none"> Prints letter-size paper at 16 ppm for black or 4 ppm for color.
Excellent print quality	<ul style="list-style-type: none"> True 600 by 600 dots per inch (dpi) text and graphics. ImageREt 2400 provides 2400 dpi color laser-class quality through a multilevel printing process. Adjustable settings to optimize print quality. The HP UltraPrecise print cartridge has a finer toner formulation that provides sharper text and graphics.
Ease of use	<ul style="list-style-type: none"> Few supplies to order. Supplies are easy to install. Convenient access to printer information and settings using software tools (HP Color LaserJet 2500 Series Toolbox, embedded Web server, Printer Status and Alerts).
Expandability	<ul style="list-style-type: none"> Optional tray 2. Included with the 2500, 2500n, and 2500tn models; compatible with the 2500L model. This 250-sheet tray for standard paper sizes reduces the frequency with which you have to add paper to the printer. Only one 250-sheet tray can be installed on the printer. Optional tray 3. Included with the 2500tn model; compatible with the 2500L, 2500, and 2500n models. This 500-sheet tray for letter- and A4- sized paper reduces the frequency with which you have to add paper to the printer. Only one 500-sheet tray can be installed on the printer. <p>NOTE: Optional tray 2 must be installed in order to install optional tray 3.</p> <ul style="list-style-type: none"> Optional HP Jetdirect print server card for connecting to a network. Included with the 2500n and 2500tn models; compatible with the 2500L and 2500 models. Two additional DIMM slots for adding memory and fonts. <p>NOTE: The printer has three DIMM slots, but the first slot (the slot on the left) might contain a flash DIMM.</p>
Flexible paper handling	<ul style="list-style-type: none"> Adjustable tray 1 for letterhead, envelopes, labels, transparencies, custom-sized media, postcards, and heavy paper. Optional tray 2 for standard-size paper. Optional tray 3 for letter- and A4-size paper. One 125-sheet output bin (top output bin). Select the top output bin (face-down bin) for most jobs, including transparencies. <p>NOTE: HP LaserJet 2500 series printers do not print in color on transparencies.</p> <ul style="list-style-type: none"> One rear output door. Use the rear output door (face-up bin) for jobs on heavy paper, light paper, or special print media. Straight-through paper path available from tray 1 to the rear output door. Manual duplexing. See the <i>HP Color LaserJet 2500 Series Printer User Guide</i> for more information.

Table 1. Product features (continued)

Category	Feature
Printer control language (PCL) printer language and fonts	<ul style="list-style-type: none"> Fast printing performance, built-in Intellifont and TrueType™ scaling technologies, built-in HP-GL/2 vector graphics, and advanced imaging capabilities are benefits of the PCL 5 and PCL 6 printer languages. PCL 5 and PCL 6 also include 45 scalable TrueType fonts and one bitmapped line printer (LP) font. PCL 5 and PCL 6 printer languages also included.
PostScript (PS) 3 emulation language and fonts	<ul style="list-style-type: none"> PostScript (PS) 3 emulation with 35 built-in PS language fonts included.
Automatic language switching	<ul style="list-style-type: none"> The printer automatically determines and switches to the appropriate printer language (such as PS 3) for the print job.
Interface connections	<ul style="list-style-type: none"> Bidirectional enhanced capabilities port (ECP) type-B parallel port (IEEE-1284 compliant). USB port. A parallel cable and a USB cable cannot be connected at the same time. If they are, the USB disables itself. EIO slot in the 2500L and 2500 models. The 2500n and 2500tn models include the optional HP Jetdirect 615n print server card.
Networking	<ul style="list-style-type: none"> The 2500L and 2500 models provide an EIO slot for an optional HP Jetdirect print server card for fast and easy connectivity. (The 2500n and 2500tn models include the HP Jetdirect 615n print server card.) All common network protocols such as Ethernet, Token Ring, and LocalTalk are available using HP Jetdirect print server cards. Wireless networking (802.11b) is available with the HP Jetdirect 615n print server card (model J6058A).
Memory expansion	<ul style="list-style-type: none"> The printer comes with 64 MB of memory and can be expanded to 320 MB by using the DIMM slots.
Energy savings	<ul style="list-style-type: none"> The printer automatically conserves electricity by substantially reducing power consumption when you are not printing. As an ENERGY STAR® partner, Hewlett-Packard Company has determined that this product meets ENERGY STAR guidelines for energy efficiency. ENERGY STAR® is a U.S. registered service mark of the United States Environmental Protection Agency.
Economical printing	<ul style="list-style-type: none"> Pages-per-sheet printing and two-sided printing using manual duplexing saves paper. See the <i>HP Color LaserJet 2500 Series User Guide</i> for more information.
Print cartridges	<ul style="list-style-type: none"> The Supplies Status page includes print cartridge and imaging drum gauges that show life remaining (for HP supplies only). No-shake cartridge design. Authentication for HP print cartridges. Enabled supplies-ordering capability.

Table 2. Physical specifications

Category	HP LaserJet 2500 without optional trays 2 and 3	HP LaserJet 2500 with optional tray 2 (250-sheet)	HP LaserJet 2500 with optional tray 3 (500-sheet)
Height	325 mm (12.80 inches)	376 mm (14.81 inches)	512 mm (20.16 inches)
Width	482 mm (18.98 inches)	482 mm (18.98 inches)	482 mm (18.98 inches)
Depth (body)	452 mm (17.80 inches)	452 mm (17.80 inches)	452 mm (17.80 inches)
Weight (with supplies)	21.52 kg (47.45 lbs)	23.9 kg (52.7 lbs)	29.27 kg (64.55 lbs)

Table 3. Consumables specifications

Category	Specification
Imaging-drum life	20,000 pages when printing only in black. 5,000 pages when printing in color. 6,000 to 8,000 pages is the average life.
Print-cartridge life	Black: 5,000 pages. Yellow, cyan, and magenta: 4,000 pages each.

Table 4. Electrical specifications

Category	110-volt models	220-volt models
Power requirements	115 to 127 V (+/- 10%) 60 Hz (+/- 2 Hz)	220 to 240 V (+/- 10%) 50 Hz (+/- 2 Hz)
Minimum recommended circuit capacity for typical product	12 Amps	6 Amps
Average power consumption (watts) — HP Color LaserJet 2500 series printers	Printing, color = 400 W Printing, monochrome = 224 W Standby = 30 W Off = 0 W	Printing, color = 403 W Printing, monochrome = 217 W Standby = 31 W Off = 0 W

CAUTION

Power requirements are based on the region where the printer is sold. Do not convert operating voltages. This will damage the printer and void the product warranty.

Table 5. Environmental specifications

Category	Operating	Storage
Temperature (printer and print cartridge)	15° to 32.5° C (59° to 90.5° F)	-20° to 40° C (-4° to 104° F)
Relative humidity	10% to 80%	95% or less

Table 6. Acoustic emissions (bystander position)

Category	Sound power (declared Per ISO 9296)	Bystander position (declared Per ISO 9296)
Printing (16 ppm)	$L_{WAd} = 6.6$ bels(A)	$L_{pAm} = 51$ dB(A)
Standby	(not audible)	(not audible)

Note

Acoustic emissions values are subject to change. See <http://www.hp.com/support/clj2500> for current information.

Media specifications

This section contains information about the sizes, weights, and capacities of media that each tray supports.

Table 7. Tray 1 specifications

Tray 1	Dimensions ¹	Weight or thickness	Capacity ²
Paper	Minimum: 76 by 127 mm (3 by 5 inches)	Weight: 60 to 177 g/m ² (16 to 47 lb)	125 sheets of 75-g/m ² (20-lb) paper
Transparencies and opaque film	Maximum: 216 by 356 mm (8.5 by 14 inches)	Thickness: 0.10 to 0.13 mm (0.0039 to 0.0051 inches)	50 typically
Labels ³		Thickness: up to 0.23 mm (up to 0.0091 inches)	50 typically
Envelopes		Weight: Up to 90 g/m ² (16 to 24 lb)	up to 10

1. The printer supports a wide range of standard and custom sizes of print media. Check the printer driver for supported sizes.
2. Capacity can vary depending on media weight and thickness, and environmental conditions.
3. Smoothness: 100 to 250 (Sheffield).

Table 8. Optional tray 2 specifications

Optional tray 2 ¹ (250-sheet tray)	Dimensions ²	Weight	Capacity ³
Letter	216 by 279 mm (8.5 by 11 inches)	60 to 105 g/m ² (16 to 28 lb)	250 sheets of 75-g/m ² (20-lb) paper
A4	210 by 297 mm (8.3 by 11.7 inches)		
A5	148 by 210 mm (5.8 by 8.3 inches)		
B5 (ISO)	176 by 250 mm (6.9 by 9.9 inches)		
B5 (JIS)	182 by 257 mm (7.2 by 10 inches)		
Executive	191 by 267 mm (7.3 by 10.5 inches)		
Legal	216 by 356 mm (8.5 by 14 inches)		
8.5 by 13 inch	216 by 330 mm (8.5 by 13 inches)		

1. Optional tray 2 supports paper only.
2. The printer supports a wide range of standard and custom sizes of print media. Check the printer driver for supported sizes.
3. Capacity can vary depending on media weight and thickness, and environmental conditions.

Table 9. Optional tray 3 specifications

Optional tray 2¹ (250-sheet tray)	Dimensions²	Weight	Capacity³
Letter	216 by 279 mm (8.5 by 11 inches)	60 to 105 g/m ² (16 to 28 lb)	500 sheets of 75-g/m ² (20-lb) paper
A4	210 by 297 mm (8.3 by 11.7 inches)		

1. Optional tray 3 supports paper only.
2. The printer supports a wide range of standard and custom sizes of print media. Check the printer driver for supported sizes.
3. Capacity can vary depending on media weight and thickness, and environmental conditions.

Model and serial numbers

The model number and serial number are listed on an identification label located underneath the top door.

The serial number contains information about the country of origin and the revision level, manufacturing date, production code, and production number of the product.

The label also contains power rating and regulatory information.

Warranty statements

Hewlett-Packard limited warranty statement

HP PRODUCT

HP Color LaserJet 2500L, 2500, 2500n, 2500tn

DURATION OF WARRANTY

1 year, Return to Authorized Service Center

1. HP warrants to you, the end-user customer, that HP hardware and accessories will be free from defects in materials and workmanship after the date of purchase, for the period specified above. If HP receives notice of such defects during the warranty period, HP will, at its option, either repair or replace products which prove to be defective. Replacement products may be either new or equivalent in performance to new.
2. HP warrants to you that HP software will not fail to execute its programming instructions after the date of purchase, for the period specified above, due to defects in material and workmanship when properly installed and used. If HP receives notice of such defects during the warranty period, HP will replace software which does not execute its programming instructions due to such defects.
3. HP does not warrant that the operation of HP products will be uninterrupted or error free. If HP is unable, within a reasonable time, to repair or replace any product to a condition as warranted, you will be entitled to a refund of the purchase price upon prompt return of the product.
4. HP products may contain remanufactured parts equivalent to new in performance or may have been subject to incidental use.
5. Warranty does not apply to defects resulting from (a) improper or inadequate maintenance or calibration, (b) software, interfacing, parts or supplies not supplied by HP, (c) unauthorized modification or misuse, (d) operation outside of the published environmental specifications for the product, or (e) improper site preparation or maintenance.
6. TO THE EXTENT ALLOWED BY LOCAL LAW, THE ABOVE WARRANTIES ARE EXCLUSIVE AND NO OTHER WARRANTY OR CONDITION, WHETHER WRITTEN OR ORAL, IS EXPRESSED OR IMPLIED AND HP SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY, SATISFACTORY QUALITY, AND FITNESS FOR A PARTICULAR PURPOSE. Some countries/regions, states or provinces do not allow limitations on the duration of an implied warranty, so the above limitation or exclusion might not apply to you. This warranty gives you specific legal rights and you might also have other rights that vary from country/region to country/region, state to state, or province to province.
7. HP's limited warranty is valid in any country/region or locality where HP has a support presence for this product and where HP has marketed this product. The level of warranty service you receive may vary according to local standards. HP will not alter form, fit or function of the product to make it operate in a country/region for which it was never intended to function for legal or regulatory reasons.
8. TO THE EXTENT ALLOWED BY LOCAL LAW, THE REMEDIES IN THIS WARRANTY STATEMENT ARE YOUR SOLE AND EXCLUSIVE REMEDIES. EXCEPT AS INDICATED ABOVE, IN NO EVENT WILL HP OR ITS SUPPLIERS BE LIABLE FOR LOSS OF DATA OR FOR DIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL (INCLUDING LOST PROFIT OR DATA), OR OTHER DAMAGE, WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE. Some countries/regions, states or provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

THE WARRANTY TERMS CONTAINED IN THIS STATEMENT, EXCEPT TO THE EXTENT LAWFULLY PERMITTED, DO NOT EXCLUDE, RESTRICT OR MODIFY AND ARE IN ADDITION TO THE MANDATORY STATUTORY RIGHTS APPLICABLE TO THE SALE OF THIS PRODUCT TO YOU.

Limited warranty for the print cartridges and imaging drum

This HP product is warranted to be free from defects in materials and workmanship during its useful life (end of life is indicated by a printer control panel low-life message).

This warranty does not cover products that have been modified, refurbished, remanufactured, misused or tampered with in any way.

This limited warranty gives you specific legal rights. You may have other rights which vary from state to state, province to province and country/region to country/region.

THE ABOVE WARRANTIES ARE EXCLUSIVE AND NO OTHER WARRANTY, WHETHER WRITTEN OR ORAL, IS EXPRESSED OR IMPLIED. THE HEWLETT-PACKARD COMPANY SPECIFICALLY DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT ALLOWED BY APPLICABLE LAW, IN NO EVENT SHALL HEWLETT-PACKARD COMPANY BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL, INDIRECT, PUNITIVE, OR EXEMPLARY DAMAGES OR LOST PROFITS FROM ANY BREACH OF THIS WARRANTY OR OTHERWISE.

In the event that your product proves to be defective, please return to place of purchase with a written description of the problem.

Declaration of Conformity

according to ISO/IEC Guide 22 and EN 45014

Manufacturer's Name: Hewlett-Packard Company

Manufacturer's Address: 11311 Chinden Boulevard
Boise, Idaho 83714-1021, USA

declares, that the product

Product Name: HP Color LaserJet 2500L, 2500, 2500n, 2500tn
Including: 250-sheet and 500-sheet paper feeder unit

Model Number: C9705A, C9706A, C9707A, C9708A
Including: C9698A, C9699A

Product Options: ALL

conforms to the following Product Specifications:

Safety: IEC 60950:1991+A1+A2+A3+A4 / EN 60950:1992+A1+A2+A3+A4+A11
IEC 60825-1:1993+A1 / EN 60825-1:1994+A11 (Class 1 Laser/LED Product)
GB4943-1995

EMC: CISPR 22:1993+A1+A2 / EN 55022:1994+A1+A2 Class B^{1*}
EN 61000-3-2:1995 / A14
EN 61000-3-3:1995
EN 55024:1998
FCC Title 47 CFR, Part 15 Class B² / ICES-003, Issue 3/ GB9254-1998
AS / NZS 3548:1995+A1+A2

Supplementary Information:

The product herewith complies with the requirements of the EMC Directive 89/336/EEC and the Low Voltage Directive 73/23/EEC, and carries the CE-marking accordingly.

- 1) The product was tested in a typical configuration with Hewlett-Packard Personal Computer Systems.
- 2) This Device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

* This product includes LAN (Local Area Network) options. When the interface cable is attached to LAN connectors, the product meets the requirements of EN55022 Class A in which case the following applies: "Warning — This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures."
- 3) The model number may include an additional suffix letter "R".

Laser safety statement

The Center for Devices and Radiological Health (CDRH) of the U.S. Food and Drug Administration has implemented regulations for laser products manufactured since August 1, 1976. Compliance is mandatory for products marketed in the United States. The printer is certified as a "Class 1" laser product under the U.S. Department of Health and Human Services (DHHS) Radiation Performance Standard according to the Radiation Control for Health and Safety Act of 1968.

Since radiation emitted inside the printer is completely confined within protective housings and external covers, the laser beam cannot escape during any phase of normal user operation.

WARNING!

Using controls, making adjustments, or performing procedures other than those specified in this user guide may result in exposure to hazardous radiation.

Canadian DOC statement

Complies with Canadian EMC Class B requirements.

«Conforme à la classe B des normes canadiennes de compatibilité électromagnétiques (CEM).»

VCCI statement (Japan)

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。
取り扱い説明書に従って正しい取り扱いをして下さい。

Korean EMI statement

사용자 안내문 (B 급 기기)

이 기기는 비업무용으로 전자파장해검정을 받은 기기로서, 주거지역에서는 물론 모든 지역에서 사용할 수 있습니다.

Finnish laser statement

LASERTURVALLISUUS

LUOKAN 1 LASERLAITE

KLASS 1 LASER APPARAT

HP Color LaserJet 2500 -laserkirjoitin on käyttäjän kannalta turvallinen luokan 1 laserlaite. Normaalisissa käytössä kirjoittimen suojakotelointi estää lasersäteen pääsyn laitteen ulkopuolelle.

Laitteen turvallisuusluokka on määritetty standardin EN 60825-1 (1993) mukaisesti.

VAROITUS!

Laitteen käyttäminen muulla kuin käyttöohjeessa mainitulla tavalla saattaa altistaa käyttäjän turvallisuusluokan 1 ylittävälle näkymättömälle lasersäteilylle.

VARNING!

Om apparaten används på annat sätt än i bruksanvisning specificerats, kan användaren utsättas för osynlig laserstrålning, som överskrider gränsen för laserklass 1.

HUOLTO

HP Color LaserJet 2500 -kirjoittimen sisällä ei ole käyttäjän huollettavissa olevia kohteita. Laitteen saa avata ja huoltaa ainoastaan sen huoltamiseen koulutettu henkilö. Tällaiseksi huoltotoimenpiteeksi ei katsota väriainekasetin vaihtamista, paperiradan puhdistusta tai muita käyttäjän käsikirjassa lueteltuja, käyttäjän tehtäväksi tarkoitettuja ylläpitotoimia, jotka voidaan suorittaa ilman erikoistyökaluja.

VARO!

Mikäli kirjoittimen suojakotelo avataan, olet alttiina näkymättömälle lasersäteilylle laitteen ollessa toiminnassa. Älä katso säteeseen.

VARNING!

Om laserprinterns skyddshölje öppnas då apparaten är i funktion, utsättas användaren för osynlig laserstrålning. Betrakta ej strålen.

Tiedot laitteessa käytettävän laserdiodin säteilyominaisuuksista:

Aallonpituus 770-795 nm

Teho 5 mW

Luokan 3B laser

Operating environment

Place the printer on a sturdy, level surface in a well-ventilated area that meets the following environmental requirements:

- temperature: 15° to 32.5° C (59° to 90.5° F)
- humidity: 10% to 80% relative humidity (no condensation)
- away from direct sunlight, open flames, and ammonia fumes
- sufficient space around the printer for access and ventilation

Figure 3. Space required

Interface ports

All HP Color LaserJet 2500 series printers have two interface ports: an IEEE-1284B parallel port and a USB port. The 2500L and 2500 models also contain an EIO slot for installing an optional HP Jetdirect print server card. To order a print server card, see chapter 7, or contact your local HP dealer.

The 2500n and 2500tn models include an HP Jetdirect 615n print server card that contains a 10/100Base-T (RJ-45) port.

Because the HP Jetdirect print server card is not included with all models, it will be referred to as the optional HP Jetdirect print server card in this documentation.

Note

You cannot connect the printer to one computer with a parallel cable and to another computer with a USB cable. If you connect both types of cables, the USB disables itself. However, you can connect one of the cables while the printer is connected to the network with an installed HP Jetdirect print server card.

Figure 4. Interface ports

Control panel features

The lights and buttons on the control panel are arranged into two main groups: supplies status (top group) and printer status (bottom group). To interpret and troubleshoot control panel light messages, see chapter 6.

The printer control panel contains the following lights and buttons:

Figure 5. Control panel lights and buttons

Understanding supplies status

Five lights indicate and one button controls the status of the print cartridges and imaging drum. To interpret and troubleshoot control panel light messages, see chapter 6.

Table 10. Supplies-status messages and actions

Light or button	Message or action
Black-supply-status light	<ul style="list-style-type: none">Light is on—print cartridge is low.Light is blinking—print cartridge is empty or missing.
Cyan-supply-status light	<ul style="list-style-type: none">Light is blinking and Attention light is on—a non-HP print cartridge is installed for the first time. For more information about resetting the printer for non-HP supplies, see page 57.
Magenta-supply-status light	(These lights will not indicate low or empty status for non-HP print cartridges.)
Yellow-supply-status light	
 Rotate Carousel button	<ul style="list-style-type: none">Press this button to rotate the print-cartridge carousel to bring the next print cartridge into the top position. The corresponding light for the print cartridge that is approaching the top position blinks quickly two or three times. <p>(If the top cover is open, then the carousel will not rotate.)</p>
Imaging drum light	<ul style="list-style-type: none">Light is on—imaging drum is low.Light is blinking—imaging drum is empty or missing.Light is blinking and Attention light is on—a non-HP imaging drum is installed for the first time. <p>(These lights will not indicate low or empty status for non-HP imaging drums.)</p>

Understanding printer status

Three lights indicate and two buttons control the printer status. To interpret and troubleshoot control panel light messages, see chapter 6.

CAUTION

You do not receive any indication of when a non-HP supply is empty. If you continue printing after the supply is empty, damage to the printer can occur. See the “Hewlett-Packard limited warranty statement” on page 23.

Table 11. Printer-status messages and actions

Light or button	Message or action
 Cancel Job button	<ul style="list-style-type: none">When the Ready light is blinking, pressing  (CANCEL JOB) cancels the current job.When the printer is not experiencing an error condition, pressing  (Go) and  (CANCEL JOB) simultaneously prints a Configuration page and a Supplies Status page. (If an HP Jetdirect print server card is installed, the printer also prints an HP Jetdirect page.)When a Supplies Status light is blinking and the Attention light is on (indicating that a non-HP supply has been installed), press  (CANCEL JOB) to continue printing.
Attention light	<ul style="list-style-type: none">When the Attention light is blinking, the printer is out of paper, a jam has occurred, or another problem that needs attention has occurred.When the Attention light is on and one of the supplies status lights blinks, a non-HP supply has been installed for the first time. For more information about resetting the printer for non-HP supplies, see page 57.
Ready light	<ul style="list-style-type: none">When the Ready light is on, the printer is ready to print (experiencing no errors that prevent printing).When the Ready light is blinking, the printer is receiving data.
 Go light and Go button	<ul style="list-style-type: none">When the Go light is on and the Attention light is blinking, pressing  (Go) either continues the print job after you load media for a manual feed or clears some errors.When the Go light is blinking, the top cover has been opened and then closed or you have pressed  (ROTATE CAROUSEL). Pressing  (Go) returns the printer to the Ready state. If you do not press  (Go), the printer returns to the Ready state on its own after approximately eight seconds.When the Go light is off, pressing  (Go) prints a Demo page. Pressing  (Go) and  (CANCEL JOB) simultaneously prints a Configuration page and a Supplies Status page. (If an HP Jetdirect print server card is installed, the printer also prints an HP Jetdirect page.)

Selecting media

Input trays

The HP Color LaserJet 2500 series printer comes with one or more input trays. See table 12 for configuration information.

Figure 6. Standard and optional input trays

Table 12. Input tray configuration

Printer model	Standard input trays	Optional input trays
HP Color LaserJet 2500L	<ul style="list-style-type: none">● tray 1 (125-sheet)	<ul style="list-style-type: none">● optional tray 2 (250 sheet)● optional tray 3 (500-sheet)
HP Color LaserJet 2500	<ul style="list-style-type: none">● tray 1 (125-sheet)● tray 2 (250-sheet)	<ul style="list-style-type: none">● optional tray 3 (500-sheet)
HP Color LaserJet 2500n	<ul style="list-style-type: none">● tray 1 (125-sheet)● tray 2 (250-sheet)	<ul style="list-style-type: none">● optional tray 3 (500-sheet)
HP Color LaserJet 2500tn	<ul style="list-style-type: none">● tray 1 (125-sheet)● tray 2 (250-sheet)● tray 3 (500-sheet)	

Note Because tray 2 and tray 3 are not included with all models, they are referred to as optional tray 2 and optional tray 3 in this documentation.

Optional tray 2 must be installed in order to install optional tray 3.

By default, the printer draws first from tray 1. If tray 1 is empty, the printer draws first from optional tray 3 (if installed) and then from optional tray 2.

Supported print media

The media sizes and types that are supported by the input trays are described in table 13. For more detailed information, see “Media specifications” in chapter 1.

CAUTION

Load only paper in optional tray 2 or optional tray 3. Other types of print media, such as labels or transparencies, might jam if printed from optional tray 2 or optional tray 3.

For information about loading input trays, see “Loading media” on page 38.

Table 13. Supported sizes and types of print media

Tray	Supported media type	Supported media size
Tray 1 (multipurpose)	<ul style="list-style-type: none">various types and weights of paper (within the size and weight limitations)envelopes (up to 10)labelstransparencies <p>NOTE: HP LaserJet 2500 series printers do not print in color on transparencies.</p> <ul style="list-style-type: none">custom-sized print media or cardstockpostcards	<ul style="list-style-type: none">from 76 by 127 mm (3 by 5 inches) to a legal-size sheet of 216 by 356 mm (8.5 by 14 inches)from 60 to 177 g/m² (16 to 47 lb)

Printer output paths

Top output bin

Printed media is collected in the top output bin when the rear output door is closed. Use the top output bin when printing most jobs, including documents on average-weight paper, letterhead, and transparencies.

The top output bin can hold up to 150 sheets. Prevent more than 150 sheets from accumulating in the top output bin, or jams can occur.

Rear output door

Print jobs emerge from the back of the printer when the rear output door is open. Use the rear output door (straight-through paper path) when printing envelopes, labels, heavy- or lightweight paper, and other thick or special print media (except transparencies). Remove each sheet as it exits the printer.

Figure 7. Printer output paths

Loading media

Load special print media such as envelopes, labels, custom-size media, and transparencies in tray 1 only. Load only paper in optional tray 2 or optional tray 3.

Loading tray 1

Tray 1 (multipurpose tray) holds up to 125 sheets of paper or other print media, or up to 10 envelopes.

For information about loading special print media such as labels and transparencies, see the *HP Color LaserJet 2500 Series Printer User Guide*.

To load tray 1

CAUTION

Avoid adding print media to tray 1 while the printer is printing, or jams can occur.

- 1 Open tray 1.
- 2 Slide out the tray extender. If the print media being loaded is longer than 229 mm (9 inches), also open the additional tray extender.
- 3 Slide the width guides slightly wider than the print media.
- 4 Place print media into the tray with the side to be printed up, and the top, short edge in first.

Note

If you are manually duplexing, see the user guide for loading instructions.

- 5 Slide the paper width guides inward until they lightly touch the print media stack on both sides without bending it. Make sure the print media fits under the tabs on the width guides.

CAUTION

If you choose to close tray 1, first wait for the printer to finish printing. Closing the tray before printing is complete can cause jams.

- 6 On the back of the printer, lower the rear output door if you are printing on special media, such as labels, envelopes, or heavy or light paper, to prevent curl.

4

5

6

Loading optional tray 2

Optional tray 2 supports standard-size paper only, including average-weight letterhead and prepunched paper. For additional information about letterhead and prepunched paper, see the *HP Color LaserJet 2500 Series Printer User Guide*.

CAUTION

Print special print media such as labels and transparencies from tray 1 only. Printing special print media from optional tray 2 or optional tray 3 can cause jams.

To load optional tray 2

- 1 Pull optional tray 2 out of the printer and remove any paper.
- 2 Move the side width guides to match the size of paper you are loading.
- 3 Extend the rear of the tray until the arrow points to the size you are loading.
- 4 Load the paper. If this is special paper such as letterhead, load it with the side to be printed facing down and the top edge toward the front of the tray.

Note

If you are manually duplexing, see the user guide for loading instructions.

- 5 Make sure the stack of paper is flat in the tray at all four corners, and keep it below the height tabs on the paper length guide in the rear of the tray. Push down on the metal paper lift plate to lock it into place.
- 6 Slide the tray back into the printer. If you set the rear of the tray to one of the longer sizes, the back of the tray will protrude from the back of the printer.

Loading optional tray 3

The optional tray 3 supports A4- and letter-size paper. Optional tray 3 supports only paper, which includes average-weight letterhead and prepunched paper.

For additional information about letterhead and prepunched paper, see the user guide.

CAUTION

Print special print media such as labels and transparencies from tray 1 only. Printing special print media from optional tray 2 or optional tray 3 can cause jams.

To load optional tray 3

- 1 Pull the tray out of the printer and remove any paper.
- 2 For letter-size paper, pull the rear stop up. For A4-size paper, push the rear stop down.
- 3 For letter-size paper, move the side width guides outward as far as possible. For A4-size paper, move the side width guides inward as far as possible.
- 4 Load the paper. If this is special paper such as letterhead, load it with the side to be printed facing down and the top edge toward the front of the tray.

Note

If you are manually duplexing, see the *HP Color LaserJet 2500 Series Printer User Guide* for loading instructions.

- 5 Make sure the stack of paper is flat in the tray at all four corners, and keep it below the height tabs on the length guide in the rear of the tray.
- 6 Slide the tray back into the printer.

Using the embedded Web server

When the printer is directly connected to a computer, the embedded Web server (EWS) is supported for Microsoft® Windows® 95, 98, NT® 4.0, Millennium Edition (Me), 2000, and XP. When the printer is connected to the network, the embedded Web server is supported for Windows 95, Mac OS 8.6 and later, UNIX®, Linux, and OS/2.

Use the embedded Web server to view printer and network status and to manage printing functions from your computer instead of at the printer control panel. The following are examples of what you can do using the embedded Web server:

- view printer status information
- view and print internal pages
- determine the remaining life of HP supplies and order new ones
- receive notification of printer and HP supplies events (network only)
- set paper-type
- view and change tray configurations
- view and change the printer control panel menu configuration
- view and change network configuration (network only)

To use the embedded Web server, you must have Microsoft Internet Explorer 4.5 or later or Netscape Navigator 4.6 or later. The embedded Web server works when the printer is directly connected to a computer or connected to an IP-based network. The embedded Web server does not support IPX- or AppleTalk-based printer connections.

You do not have to have Internet access to open and use the embedded Web server. However, if you click a link in the **Other Links** area, you must have Internet access in order to go to the site associated with the link.

To open the embedded Web server

- 1 Open the embedded Web server by using one of these methods:
 - From the HP Color LaserJet 2500 Series Toolbox, click the picture of the printer on the Device tab (Windows 98, NT 4.0, Me, 2000, and XP only).
 - For networked printers only, type the IP address for the printer. To find the IP address, print a Configuration page at the printer control panel by pressing  (Go) and  (Cancel Job) simultaneously.

Note

When you open the URL, you can bookmark it so that you can return to it quickly in the future.

- 2 The embedded Web server has three tabs that contain settings and information about the printer: the **Information** tab, the **Settings** tab, and, if the printer is connected to a network, the **Networking** tab. Click the tab that you want to view.
- 3 See the following sections for more information about each tab.

Information tab

The Information tab contains the following pages.

- **Device Status.** This page shows the printer status and the life remaining of HP supplies, with 0 percent indicating that a supply is empty. The page also shows the type and size of print media set for each tray. To change the default settings, click **Change Settings**.
- **Configuration page.** This page shows the information found on the printer Configuration page.
- **Supplies Status.** This page shows the life remaining for HP supplies, with 0 percent indicating that a supply is empty. This page also provides supplies part numbers. To order new supplies, click **Order Supplies** in the **Other Links** area on the left side of the window. To visit any website, you must have Internet access.
- **Event log.** This page shows a list of all printer events and errors.
- **Usage page.** This page shows a summary of the number of pages the printer has printed, grouped by size and type.
- **Device Information.** This page shows the printer network name, address, and model information. To change these entries, click **Device Information** on the **Settings** tab.

Settings tab

Use the Settings tab to configure the printer from your computer. The **Settings** tab can be password protected. If this printer is networked, always consult with the printer administrator before changing settings on this tab.

The **Settings** tab contains the following pages.

- **Configure Device.** Configure all printer settings from this page. This page contains the traditional menus found on printers using a control panel display. These menus include **Information**, **Paper Handling**, **Configure Device**, and **Diagnostics**.
- **Alerts** (Network only). Set up to receive e-mail alerts for various printer events.
- **Email** (Network only). Used in conjunction with the Alerts page to set up incoming and outgoing e-mail, as well as to set e-mail alerts.
- **Security.** Set a password that must be typed to gain access to the **Settings** and **Networking** tabs. Enable and disable certain features of the EWS.
- **Other Links.** Add or customize a link to another website. This link appears in the **Other Links** area on all embedded Web server pages. These permanent links always appear in the **Other Links** area: **HP Instant Support™**, **Order Supplies**, and **Product Support**. For more information, see [“Other links” on page 43](#).
- **Device Information.** Name the printer and assign an asset number to it. Type the name and e-mail address for the primary contact who will receive information about the printer.
- **Language.** Determine the language in which to show the embedded Web server information.

Networking tab

The network administrator uses the Networking tab to control network-related settings for the printer when it is connected to an IP-based network. This tab will not appear if the printer is directly connected to a computer, or if the printer is connected to a network with anything other than an HP Jetdirect print server card.

Other links

This section contains links that connect you to the Internet. You must have Internet access in order to use any of these links. If you use a dial-up connection and did not connect when you first opened the embedded Web server, you must connect before you can visit these websites. Connecting might require that you close the embedded Web server and reopen it.

- **HP Instant Support™.** Connects you to the HP website to help you find solutions. This service analyzes your printer error log and configuration information to provide diagnostic and support information specific to your printer.
- **Order Supplies.** Click this link to connect to the HP website and order genuine HP supplies, such as print cartridges, an imaging drum, and paper.
- **Product Support.** Connects to the support site for the HP Color LaserJet 2500 printer. Then, you can search for help regarding general topics.

Using printer status and alerts

Printer Status and Alerts is only supported for Windows 98, NT 4.0, ME, 2000, and XP.

The Printer Status and Alerts software is available to users of both networked and directly connected printers. Use this software to view the embedded Web server information for a particular printer. The software also generates messages on the computer regarding the status of the printer and print jobs. Depending on how the printer is connected, you can receive different messages.

- **Networked printers.** You can receive regular job status messages that appear every time a print job is sent to the printer or every time the print job finishes printing. You can also receive alert messages when two types of problems occur:
 - The printer is experiencing a problem, but it can continue to print (for example, a tray that is not being used is out of print media or is open, or a print cartridge is low).
 - The printer is experiencing a problem that prevents it from printing (for example, the printer is out of paper, or a print cartridge is empty).
- **Directly connected printers.** You can receive alert messages that appear when the printer experiences a problem. You can also receive messages only when supplies are low.

You can set alerts options for a single printer that supports Printer Status and Alerts, or you can set alert options for all printers that support Printer Status and Alerts. For networked printers, these alerts only appear for your jobs.

Note

Even if you are setting alert options for all printers, not all options you select can apply to all printers. For example, if you select the option for notifying you when the print cartridges are low, then all directly connected printers that support Printer Status and Alerts will generate a message when the print cartridges are low. However, none of the networked printers will generate this message, nor will directly connected printers that do not support Printer Status and Alerts.

To choose which status messages appear

- 1 Open Printer Status and Alerts in one of these ways:
 - Double-click the Printer Status and Alerts tray icon, which is near the clock in the Tray Manager.
 - On the Start menu, point to **Programs**, point to **Printer Status and Alerts**, and click **Printer Status and Alerts**.
- 2 Click the Options icon in the left pane.
- 3 In the **For** field, select the printer driver for this printer, or select **All Printers**.
- 4 Clear the options for the messages you do not want to appear, and select the options for the messages you do want to appear.
- 5 Under Status Check Rate, select how frequently you want the software to update the printer status information that the software uses to generate the messages. Status Check Rate might not be available if the printer administrator has restricted the rights to this function.

To view status messages and information

On the left side of the window, select the printer for which you want to see information. Information provided includes status messages, supplies status, and printer capabilities. You can also click the Job History (clock) icon at the top of the window to view a list of previous jobs sent to the printer from your computer.

HP policy on non-HP supplies	57
HP fraud hotline	57

Life expectancies of supplies

Inspect supplies when you service the printer. Replace supplies as needed, based on failure or wear, rather than on usage.

The following table lists approximate schedules for replacing supplies.

Table 14. Life expectancies of supplies

Description	Part number	Estimated life (in number of pages at 5% coverage*)	Remarks
Print cartridge, black (user replaceable)	C9700A	5,000	When print becomes faint, redistribute toner in the cartridge by gently shaking the cartridge from side to side.
Print cartridge, cyan (user replaceable)	C9701A	4,000	
Print cartridge, yellow (user replaceable)	C9702A	4,000	
Print cartridge, magenta (user replaceable)	C9703A	4,000	
Imaging drum	C9704A	20,000 (black only) 5,000 (color) The average life is 6,000 to 8,000 pages.	
Printer transfer roller	RF5-4040-000CN		Can affect print quality and/or paper movement.
Printer pickup roller	RB3-0160-000CN		Look for glazing and/or cracks.
Printer separation pad	RF5-4012-000CN		Can affect document movement.
Fuser assembly (100 to 127 V)	RG5-6903-000CN		Can affect print quality and paper movement.
Fuser assembly (220 to 240 V)	RG5-6913-000CN		Can affect print quality and paper movement.
Optional tray 2 separation pad	RB2-9960-000CN		Can affect document movement.
Optional tray 3 separation pad	RG5-6899-000CN		Can affect document movement.

* The estimated toner cartridge life is based on letter- or A4-sized paper with an average of five percent toner coverage and a medium density setting. Print cartridge life can be extended further by conserving toner by using draft-mode settings.

User-replaceable parts

Replacing the pickup roller and separation pad

- 1 Turn the printer off and disconnect the power cable from the back of the printer.
- 2 Open tray 1.
- 3 Find the faceplate cover that is located beneath the pickup roller in tray 1.
- 4 Grasp both sides of the center tab and pull the cover out of the printer.
- 5 Squeeze the tab on the idler roller that is located on the right side of the pickup roller. If the tab is not visible, rotate the idler roller so that the tab is toward the front of the printer.

6

7

8

9

10

- 6 Slide the idler roller to the right to separate it from the pickup roller.
- 7 Squeeze the tab on the idler roller that is located on the left side of the pickup roller. If the tab is not visible, rotate the idler roller so that the tab is toward the front of the printer.
- 8 Slide the idler roller to the left to separate it from the pickup roller.
- 9 Press and hold the button that is located on the right side of the pickup roller. Slide the pickup roller slightly to the right, and then pull it off of the shaft.

CAUTION

To prevent the shaft retaining pin from falling out, do not move the remaining hub that is located to the left of the pickup roller.

- 10 Locate the separation pad beneath the area of the shaft from which the pickup roller was removed.

11

11 Insert a flatblade screwdriver into the slot under the separation pad. Pry the pad up from the spring-loaded base by twisting the screwdriver until the tabs are separated from the printer.

12 Use one hand to push the spring-loaded base down and then use the other hand to pull the separation pad up and out of the printer.

Note

If you feel resistance when you try to remove the pad, make sure that the tabs are completely separated from the printer.

12

13 Push the spring-loaded base down and position the new separation pad in the empty slot.

Note

Make sure that the two tabs on the edge of the pad are toward the front of the printer.

13

14 Snap both sides of the separation pad firmly into place until they click.

CAUTION

If the pad is not straight, or if space exists between the pad and the base, make sure that the tabs on the pad are toward the front of the printer.

14

15 Hold down the new separation pad. Position the new pickup roller so that the button is on the right side, and the open side of the roller faces down. Make sure that the small ridge on the open side of the roller aligns with the groove in the shaft.

15

16

16 Slide the left and right idler rollers inward, against the pickup roller, until the idler rollers click into place.

17 Hold the faceplate cover as shown in the illustration, and align the cover with the rails on the inside of the printer.

18 Grasp both sides of the center tab and insert the cover into the printer until the cover clicks into place. Close tray 1.

17

18

Replacing the separation pad in tray 2 or in optional tray 3

- 1 Remove the tray from the printer and place it on a flat surface. Remove any paper from the tray.
- 2 Locate the separation pad in the base at the inside-front edge of the tray.
- 3 Press the large metal plate at the bottom of the tray down. Insert a flatblade screwdriver in the slots on each side of the base and push the tabs out of the slots. **Note:** In a 250-sheet tray, the plate locks down; in a 500-sheet tray, you have to hold the plate down manually.
- 4 Pull the separation pad up and out of the tray.
- 5 Use one hand to position the new separation pad above the empty base. Align the grooves on the sides of the pad with the sides of the base, and then slide the pad down until the tabs snap into the slots on the base.

- 6 Reload any print media that you removed, and then slide the tray into the printer.
- 7 Reconnect the power cable. Turn the printer on.
- 8 When the green Ready light is on, press **Go** to print a Demo page, which verifies that the printer works and that installation is complete.
- 9 If the page does not print, or to find additional help, go to <http://www.hp.com/support/clj2500>.

Note

If the page does not print, reconnect the power cable. Make sure that the Ready light is on and that no other lights are on or blinking. Make sure that print media is loaded and that all parts are installed correctly.

Cleaning the printer

Cleaning the engine

During the printing process, paper, toner, and dust particles can accumulate inside the printer. Over time, this buildup can cause print-quality problems such as toner specks or smearing. Use a cleaning page to correct and prevent these types of problems.

Figure 8. Toner specks and smearing

To use a cleaning page

Note

The following procedure must be performed from the HP Color LaserJet 2500 Series Toolbox, which is supported for Windows 98, NT 4.0, Me, 2000, and XP. To clean the engine when the computer is running a different supported operating system, see the Readme on the software CD-ROM, or visit <http://www.hp.com/support/clj2500>.

- 1 Make sure the printer is turned on and in the Ready state.
- 2 Open the HP Color LaserJet 2500 Series Toolbox.
- 3 On the **Troubleshooting** tab, click **Cleaning Page** and click **Print**. A page with a pattern prints from the printer.
- 4 At the printer, remove any media from tray 1 (multipurpose tray).
- 5 Remove the page that printed and load it face-down into tray 1 (see figure 9).

Figure 9. Loading the cleaning page in tray 1

- 6 At the computer, click **Clean**.

Note

For even better results, repeat this procedure several times.

Calibrating the printer

The printer automatically performs a calibration when the imaging drum or a print cartridge is changed, and at set intervals determined by the total number of pages the printer has printed. You can change the interval at which the printer performs automatic calibrations by using the embedded Web server.

You can also calibrate the printer manually when you clean the density sensor or when you experience color-related issues.

To calibrate the printer manually

Turn the printer off, wait one minute, and then turn the printer on again.

To calibrate the printer from the HP Color LaserJet 2500 Series Toolbox

Note

The following procedure must be performed from the HP Color LaserJet 2500 Series Toolbox, which is only supported for Windows 98, NT 4.0, Me, 2000, and XP. To clean the engine when the computer is running a different supported operating system, see the Readme file on the software CD-ROM, or visit <http://www.hp.com/support/clj2500>.

- 1 Open the HP Color LaserJet 2500 Series Toolbox in one of these ways:
 - On the desktop, double-click the **HP Color LaserJet 2500 Series Toolbox** icon.
 - On the **Start** menu, point to **Programs**, point to **HP Color LaserJet 2500**, and select the **HP Color LaserJet 2500 Series Toolbox**.
- 2 On the **Troubleshooting** tab, click **Diagnostic Tools** (on the left side of the screen).
- 3 Click **Calibrate Now**.

Managing supplies

For warranty information about these supplies, see “Limited warranty for the print cartridge and drum” on page 24.

Supplies life

The life of the imaging drum depends on the number of black-only or color pages that print jobs require. An HP Color LaserJet 2500 series imaging drum lasts an average of 20,000 pages when printing black-only pages and 5,000 pages when printing color pages. Actual life lies somewhere between these two numbers, depending on the number of black-only pages you print versus color. The average life is between 6,000 and 8,000 pages.

The life of a print cartridge depends on the amount of toner that print jobs require. When printing text at five-percent coverage, an HP Color LaserJet 2500 series cyan, magenta, or yellow print cartridge lasts an average of 4,000 pages, and a black print cartridge lasts an average of 5,000 pages.

Checking and ordering supplies

You can check the supplies status by using the printer control panel, printing a Supplies Status page, viewing the embedded Web server, viewing Printer Status and Alerts, or viewing HP Web Jetadmin. Hewlett-Packard recommends that you place an order for a replacement print cartridge when you first receive the Low message for a print cartridge. The Low message indicates that approximately two weeks of life remain. When you use a new, authentic HP print cartridge or imaging drum, you can obtain the following types of supplies information:

- amount of cartridge or drum life remaining
- estimated number of pages that can be printed
- number of pages printed
- other supplies information

Note

If the printer is connected to the network, you can set the embedded Web server to notify you by e-mail when a print cartridge or the imaging drum is low. If the printer is directly connected to a computer, you can set Printer Status and Alerts to notify you when supplies are low.

To check status and order supplies at the control panel

Do one of the following:

- Check the supplies status lights on the printer control panel. These lights indicate when a print cartridge or the imaging drum is low or empty. The lights also indicate when a non-HP print cartridge is first installed. See “Understanding supplies status” on page 33 to interpret the light patterns.
- Press  (Go) and  (CANCEL JOB) simultaneously. A Supplies Status page (and the Configuration page and, possibly, the HP Jetdirect page) prints. Check the supplies levels on the Supplies Status page. See the *HP Color LaserJet 2500 Series Printer User Guide* for more information.

If the supplies levels are low, you can order supplies through your local HP dealer, by telephone, or online. See chapter 7 for part numbers. See <http://www.hp.com/go/ljsupplies> to order online.

To check status and order supplies using the embedded Web server

- 1 Open the HP Color LaserJet 2500 Series Toolbox and then click the **Information** tab.
- 2 Click **Device Status** (on the left side of the window) and then click **Supplies Status** to see more information, such as part numbers.
- 3 If the print cartridges are low or empty, you can click **Order Supplies** in the **Other Links** area. This opens a browser and connects you to the Supplies section of the HP website. You must have Internet access to connect to the website.

Note

You can also click the **Order Supplies** link from the HP Color LaserJet 2500 Series Toolbox. You must have Internet access to connect to the website.

To check status and order supplies using Printer Status and Alerts

If the printer is directly connected to the computer, you can set Printer Status and Alerts to notify you when the supplies are low. On both directly connected and network printers, you can receive these messages if you choose to receive alerts about events that do not prevent the printer from printing (a print cartridge is low) or that actually prevent the printer from printing (a print cartridge is empty). After receiving a message, click **Order Supplies Online** in Printer Status and Alerts to connect to the Supplies section of the HP website. You must have Internet access to connect to the website.

To check status and order supplies using HP Web Jetadmin

In HP Web Jetadmin, select the printer device. The device status page shows supplies information. To order, use the HP Color LaserJet 2500 Series Toolbox or the embedded Web server, or see chapter 7.

Storing supplies

Follow these guidelines for storing print cartridges and the imaging drum:

- Do not remove the print cartridge or imaging drum from its package until you are ready to use it.

CAUTION

To prevent damage, do not expose the print cartridge or imaging drum to light for more than a few minutes.

- See table 5, "Environmental specifications," on page 19 for operating- and storage-temperature ranges.
- Store the supply in a horizontal position.
- Store the supply in a dark, dry location away from heat and magnetic sources.

Replacing and recycling supplies

To install a new HP print cartridge or imaging drum and recycle the used one, follow the instructions included in the box that contains the new supply, or see the *HP Color LaserJet 2500 Series Printer Getting Started Guide*. See the *HP Color LaserJet 2500 Series Printer User Guide* for more information about recycling.

HP policy on non-HP supplies

Hewlett-Packard Company cannot recommend the use of non-HP supplies, either new or remanufactured. Because they are not HP products, HP cannot influence their design or control their quality. Service or repairs required as a result of using a non-HP supply will *not* be covered under the printer warranty.

When you insert a supply into the printer, the printer will inform you if the supply is not a genuine HP supply. If you insert a genuine HP supply that has reached the low state from another HP printer, the printer identifies the supply as non-HP. Simply return the supply to the original printer to reactivate HP features and functionality.

Resetting the printer for non-HP supplies

When you install a non-HP print cartridge or imaging drum, the light next to the print cartridge or imaging drum you replaced blinks and the Attention light is on. You must press  (CANCEL JOB) the first time you install this non-HP supply. The status lights will not indicate when this type of supply is low or empty.

CAUTION

The printer will not stop printing when a non-HP supply is empty. Printer damage can occur if the printer attempts to print with an empty print cartridge or imaging drum. See “Warranty information” on page 23.

HP fraud hotline

Call the HP fraud hotline if the supplies status lights, the embedded Web server, or HP Status and Alerts indicates that the print cartridge or imaging drum is not an HP product and you think that it is genuine. Hewlett-Packard will help determine if the product is genuine and take steps to resolve the problem.

Your print cartridge or imaging drum might not be a genuine HP product if you notice the following issues:

- You are experiencing a high number of problems with the print cartridge or imaging drum.
- The print cartridge or imaging drum does not look like an HP product usually does (for example, the pull tab or the box is different).

In the United States, call toll-free: (1) (877) 219-3183.

Outside the United States, you can call collect. Dial the operator and ask to place a collect call to this telephone number: (1) (770) 263-4745. If you do not speak English, a representative at the HP fraud hotline who speaks your language will assist you. Or, if someone who speaks your language is not available, a language line interpreter will connect approximately one minute after the beginning of the call. The language line interpreter is a service that translates between you and the representative for the HP fraud hotline.

Introduction

This chapter presents an overview of the relationships between major components in the HP Color LaserJet 2500 series printer, and includes a detailed discussion of the image-formation system. The following systems are discussed:

- engine control system
- laser/scanner system
- pickup and feed system
- image-formation system

Figure 10. Cross-section of the printer

1 Laser/scanner	9 Transfer belt cleaning roller	17 Feed belt
2 Developing cylinder	10 Registration shutter	18 Carousel
3 Photosensitive drum	11 Pickup roller	19 Print cartridge
4 Primary charging roller	12 Tray 1	20 Fusing film
5 Imaging drum	13 Separation pad	21 Pressure roller
6 Transfer belt	14 Registration roller	22 Fuser delivery roller
7 Density sensor	15 Secondary transfer roller	23 Top output bin delivery roller
8 Primary transfer roller	16 Auxiliary transfer-belt cleaning roller	

Engine control system

The engine control system coordinates all printer functions. It drives the laser/scanner system, the image formation system, and the pickup and feed system.

The engine control system contains the following components:

- dc controller
- high-voltage power-supply PCB
- low-voltage power unit:
 - fuser-control circuit
 - low-voltage power-supply PCB

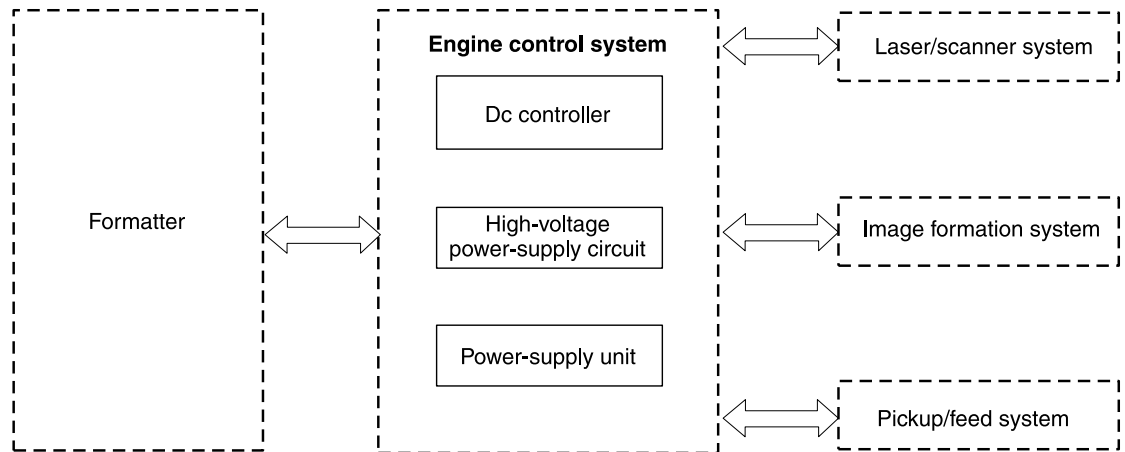

Figure 11.

Engine control system (includes the basic configuration of the printer)

Basic sequence of operation

Operation sequences are controlled by the CPU in the dc controller in the engine control system. Table describes engine operations for each period of a print operation.

Table 15. Basic sequence of operation

Period	Duration	Purpose	Remarks
WAIT (wait)	From the time the power switch is turned on until transfer-belt cleaning is complete.	Clears potential from the drum surface and cleans the transfer belt.	See figure 12 for a complete description of the WAIT (power-on) period. Also see the general timing charts beginning on page 212 for detailed information about timing.
STBY (standby)	From the end of the WAIT or LSTR period until either a print command is sent from the formatter or the power is turned off.	Allows the printer to be ready for print commands.	
INTR (initial rotation)	From the time of the print command until detection of the HP1 (transfer-belt home-position detection) signal for the first color.	Prepares the photosensitive drum for printing.	
PRINT (print)	From the end of the INTR period until detection of the transfer-belt home-position signal for the secondary transfer.	Forms the image on the photosensitive drum and transfers the toner image to the transfer belt.	
LSTR (last rotation)	From the end of the PRINT period until the main motor stops rotating.	Transfers the toner image on the transfer belt to the media and delivers the printed media.	After LSTR, the printer returns to STBY.

Power-on sequence

The power-on sequence is represented by the flowchart in figure 12.

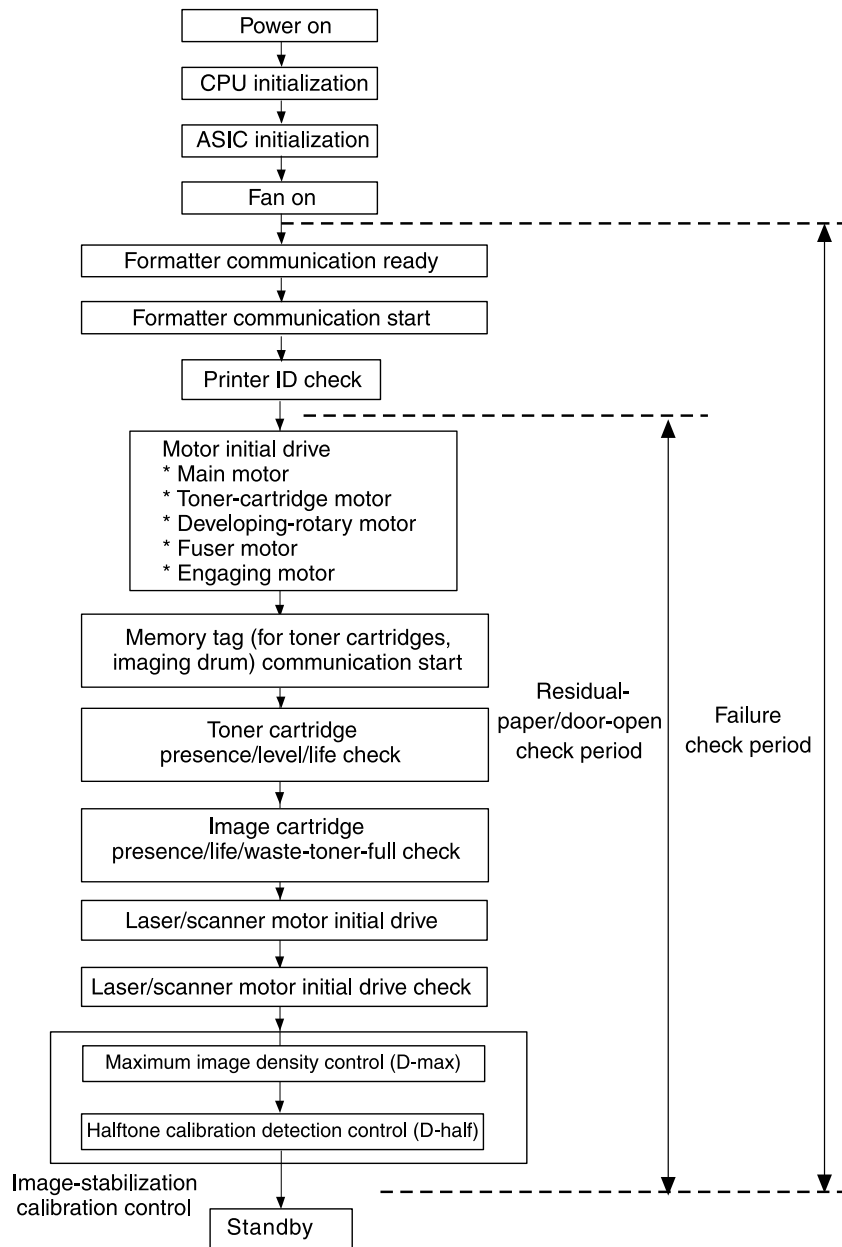

Figure 12.

Power-on sequence

Motors and fans

Figure 13. Motors and fans

Table 16. Motors and fans

Reference	Description
1	Engaging motor
2	Developing-rotary motor
3	Toner-cartridge motor
4	Fuser motor
5	Main motor
6	Cooling fan

Laser/scanner system

The laser/scanner system receives video signals from the dc controller, and then it converts the signals into latent images on the photosensitive drum. The dc controller controls the laser/scanner.

Figure 14. Laser/scanner system

Pickup and feed system

The pickup and feed system consists of several types of feed rollers and sensors. The dc controller drives the paper and feed system by controlling two motors, two clutches, and the solenoid.

Two photo-interrupters (PS1 and PS711) detect media as it passes. If media does not reach or pass each sensor within the specified time period, the dc controller determines that a jam has occurred and alerts the video controller circuit.

The following components are identified in figure 15:

- **PS1** fusing-delivery paper sensor
- **PS711** registration paper sensor
- **PS718** tray 1 (multipurpose tray) paper sensor
- **DCM701** main motor
- **PM702** fuser motor
- **SL92** tray 1 pickup solenoid
- **CL1** registration clutch
- **CL2** roller-engaging clutch

Figure 15. Pickup and feed system

Paper trays

The dc controller drives the operation sequence of the paper trays. It signals the driver PCB in tray 2 (250-sheet paper tray) and in tray 3 (250-sheet paper tray), and then each driver PCB controls the motors and solenoids in its paper tray.

The following components are identified in figure 16:

- **DCM701** gear-train motor (printer)
- **SL9** pickup solenoid (optional tray 2)
- **PS716** paper sensor (optional tray 2)
- **PS717** paper-feed sensor

Note

Only tray 2 (250-sheet tray) is shown; tray 3 (500-sheet tray) is similar.

Figure 16. Optional tray 2 (250-sheet paper tray)

Jam detection

The registration sensor (PS711) and the fusing paper sensor (PS1) detect media moving through the printer. If a jam is detected, the dc controller immediately stops the printing process and sends a message to the video controller circuit.

A jam can be detected under any of the following conditions:

- Pickup delay jam. The leading edge of the paper does not reach the registration sensor (PS711) within 1.1 seconds (tray 1), 1.7 seconds (optional tray 2), or 2.8 seconds (optional tray 3).
- Pickup stationary jam. The registration clutch is on, and the registration sensor (PS711) does not detect the trailing edge of the paper within 3.4 seconds after the start of a re-pickup operation.
- Delivery delay jam. The registration clutch is on, and the fusing-delivery paper sensor (PS1) does not detect the leading edge of the paper within 2.3 seconds after the start of a re-pickup operation.
- Delivery stationary jam. The leading edge of paper does not pass the fusing-delivery paper sensor (PS1) within 2.4 seconds after it has passed the registration sensor (PS711).
- Door open jam. The main CPU detects that the top cover is open during a print operation.
- Residual paper jam. The main CPU detects one or more of the following conditions:
 - Power is turned on.
 - The printer is returning from sleep mode.
 - The printer door is closed after a jam occurrence.
 - The registration sensor (PS711) and fusing-delivery sensor (PS1) detect paper.

Image formation system

The image formation system, which forms a toner image on media, consists of several interdependent systems:

- electrostatic latent-image-formation system
- developing system
- transfer block
- fuser
- ITB cleaning block
- imaging drum (with ITB)
- photosensitive drum

Figure 23. Image formation system

Image formation process

Laser printing requires the interaction of several different technologies including electronics, optics, and electrophotographics to provide a printed page. Each process functions independently and must be coordinated with the other printer processes. Image formation consists of the following five processes:

- 1 Latent-image formation
- 2 Developing
- 3 Image transfer
- 4 Fusing
- 5 Transfer-belt cleaning

The five processes are divided into twelve steps, which are shown in figure 24 and described in the following sections.

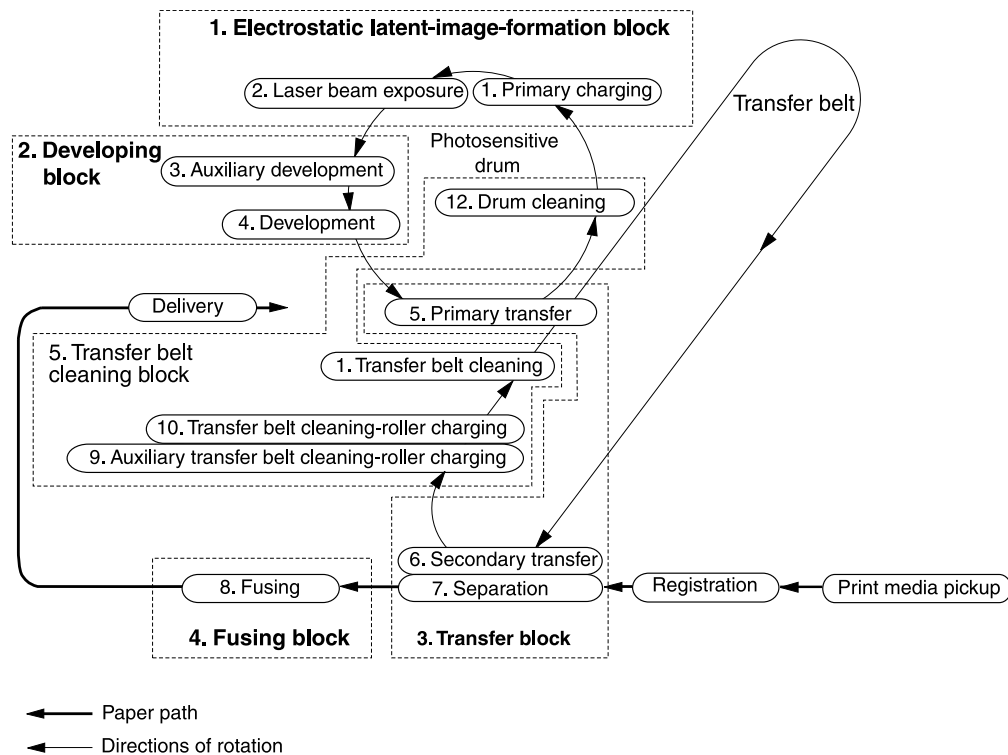

Figure 24.

Image formation process

Latent image formation stage

Step 1: primary charging

A dc bias is applied to the primary charging roller, which transfers a uniform negative potential to the photosensitive drum.

Figure 25.

Step 1: primary charging

Step 2: laser-beam exposure

The laser beam scans the photosensitive drum to neutralize negative charges on parts of the drum. An electrostatic latent image is formed on the drum where negative charges were neutralized.

Figure 26.

Step 2: laser-beam exposure

Developing stage

The developing cylinder comes in contact with the photosensitive drum to deposit toner onto the electrostatic latent image.

Note

The charges on the exposed area on the drum are shown as positive in figure 27. The charges are actually negative, but they are more positive than the charges on the developing cylinder.

Figure 27.

Developing block

Step 3: developing

Toner acquires a negative charge through friction from the developing cylinder and the blade. When the negatively charged toner comes in contact with the drum, the toner adheres to the electrostatic latent image. The image on the drum becomes visible because of the toner.

Figure 28.

Step 3: developing

Transfer stage

Step 4: primary transfer

The primary transfer roller, to which a dc positive bias is applied, imparts a positive charge on the transfer belt. The negatively-charged toner on the drum is transferred to the positively-charged transfer belt. This procedure is repeated for each color (yellow, magenta, cyan, and black).

The dc positive bias is increased for each successive color to make sure that all of the colors adhere to the transfer belt.

Figure 29.

Step 4: primary transfer

Step 5: secondary transfer

The secondary transfer roller, to which a dc positive bias is applied, imparts a positive charge to the print media. When the print media comes in contact with the transfer belt, the toner is transferred to the print media.

Note

When secondary transfer is complete, a dc negative bias is applied to the secondary transfer roller to prevent toner on the transfer belt from adhering to the secondary transfer roller.

Figure 30.

Step 5: secondary transfer

Step 6: separation

The elasticity of the print media causes its separation from the transfer belt. A static charge eliminator aids separation by weakening any electrostatic adhesion.

Figure 31.

Step 6: separation

Fusing stage

Step 7: fusing

The dc negative bias applied to the fusing film strengthens the holding force of the toner on the print media and prevents the toner from scattering.

Figure 32.

Step 7: fusing

Step 8: roller charging (auxiliary ITB cleaning roller)

During secondary transfer, not all of the toner on the transfer belt is transferred to the print media. Toner that remains on the belt is called “residual toner.”

The auxiliary transfer belt cleaning roller, to which a dc positive bias is applied, imparts a positive charge to the residual toner, strengthening its hold on the transfer belt. This prevents toner from falling off of the transfer belt, scattering in the printer.

Figure 33.

Step 8: roller charging (auxiliary transfer belt cleaning roller)

Step 9: roller charging (transfer belt cleaning roller)

The transfer belt cleaning roller, to which a dc positive bias is applied, imparts a positive charge to the residual toner on the transfer belt. This positive charge is stronger than the positive charge applied in step 8, so the earlier charge now behaves like a negative charge.

Figure 34.

Step 9: roller charging (transfer belt cleaning roller)

Step 10: transfer belt cleaning

A dc positive bias is applied to the transfer belt to produce a difference in potential between the belt and the photosensitive drum. This causes the transfer of the residual toner to the drum.

Figure 35.

Step 10: transfer belt cleaning

Step 11: drum cleaning

The cleaning blade scrapes the residual toner off of the photosensitive drum, where the waste toner screws collect and deposit the toner into the waste toner case.

Figure 36.

Step 11: drum cleaning

Print cartridge

The printer has four print cartridges: yellow, magenta, cyan, and black. Each print cartridge contains a developing cylinder, toner-feed roller, and stirrer. The developer motor rotates these parts, so that each print cartridge can use toner to form a visible image on the drum.

The carousel motor rotates the E-label reader, which communicates E-label information to the dc controller.

The developing rotary/toner level detection PCB uses an LED (light emitter) and a photodiode (light receiver) to determine the toner level in each print cartridge.

Figure 37.

Print cartridge

Imaging-drum E-label

The E-label is nonvolatile memory, which is built into the imaging drum and stores usage information. When the imaging drum is installed in the printer, the E-label makes constant contact with the E-label reader. The E-label reader sends memory information to the dc controller, which updates the information and sends it back to the E-label.

The dc controller instructs the E-label to read information when:

- the printer is turned on
- the top cover is closed
- a command is sent from the video controller

The dc controller instructs the E-label to write information when:

- a specified period occurs during printing
- a command is sent from the video controller

If the E-label reader fails to read or write information four times in a row, the dc controller notifies the video controller that an abnormality exists in the imaging drum.

Introduction

Removal and replacement strategy

This chapter documents removal and replacement of field replaceable units (FRUs) only.

Replace parts in the reverse order of their removal. Directions for difficult or critical replacement procedures are included.

WARNING!

The sheet-metal edges of the product can be sharp. Use caution when working on the product.

Note

Note the length, diameter, color, type, and location of each screw. Be sure to return each screw to its original location during reassembly.

Incorrectly routed or loose wire harnesses can interfere with other internal components and can become damaged or broken. Frayed or pinched harness wires can be difficult to locate. When replacing wire harnesses, always use the provided wire loops, lance points, or wire-harness guides.

Electrostatic discharge

CAUTION

The product contains parts that are sensitive to electrostatic discharge (ESD). Always service the product at an ESD-protected workstation, or use an ESD mat.

Watch for the ESD symbol (shown at left) to identify the parts that are sensitive to ESD. Protect these parts by using an ESD wrist strap and protective ESD pouches.

User-replaceable parts

This chapter contains removal and replacement procedures for the imaging drum (see page 90) and the print cartridge (see page 91).

To remove and replace the pickup roller or separation pad, see “User-replaceable parts” on page 47.

Required tools

The following tools are needed to service this product:

- #2 Phillips screwdriver with magnetic tip
- Small flatblade screwdriver
- Small needle-nose pliers
- ESD mat
- Penlight

CAUTION

A PoziDrive screwdriver will damage screw heads on the product. Use a #2 Phillips screwdriver.

If you use a multispeed screwdriver, use a torque limiter.

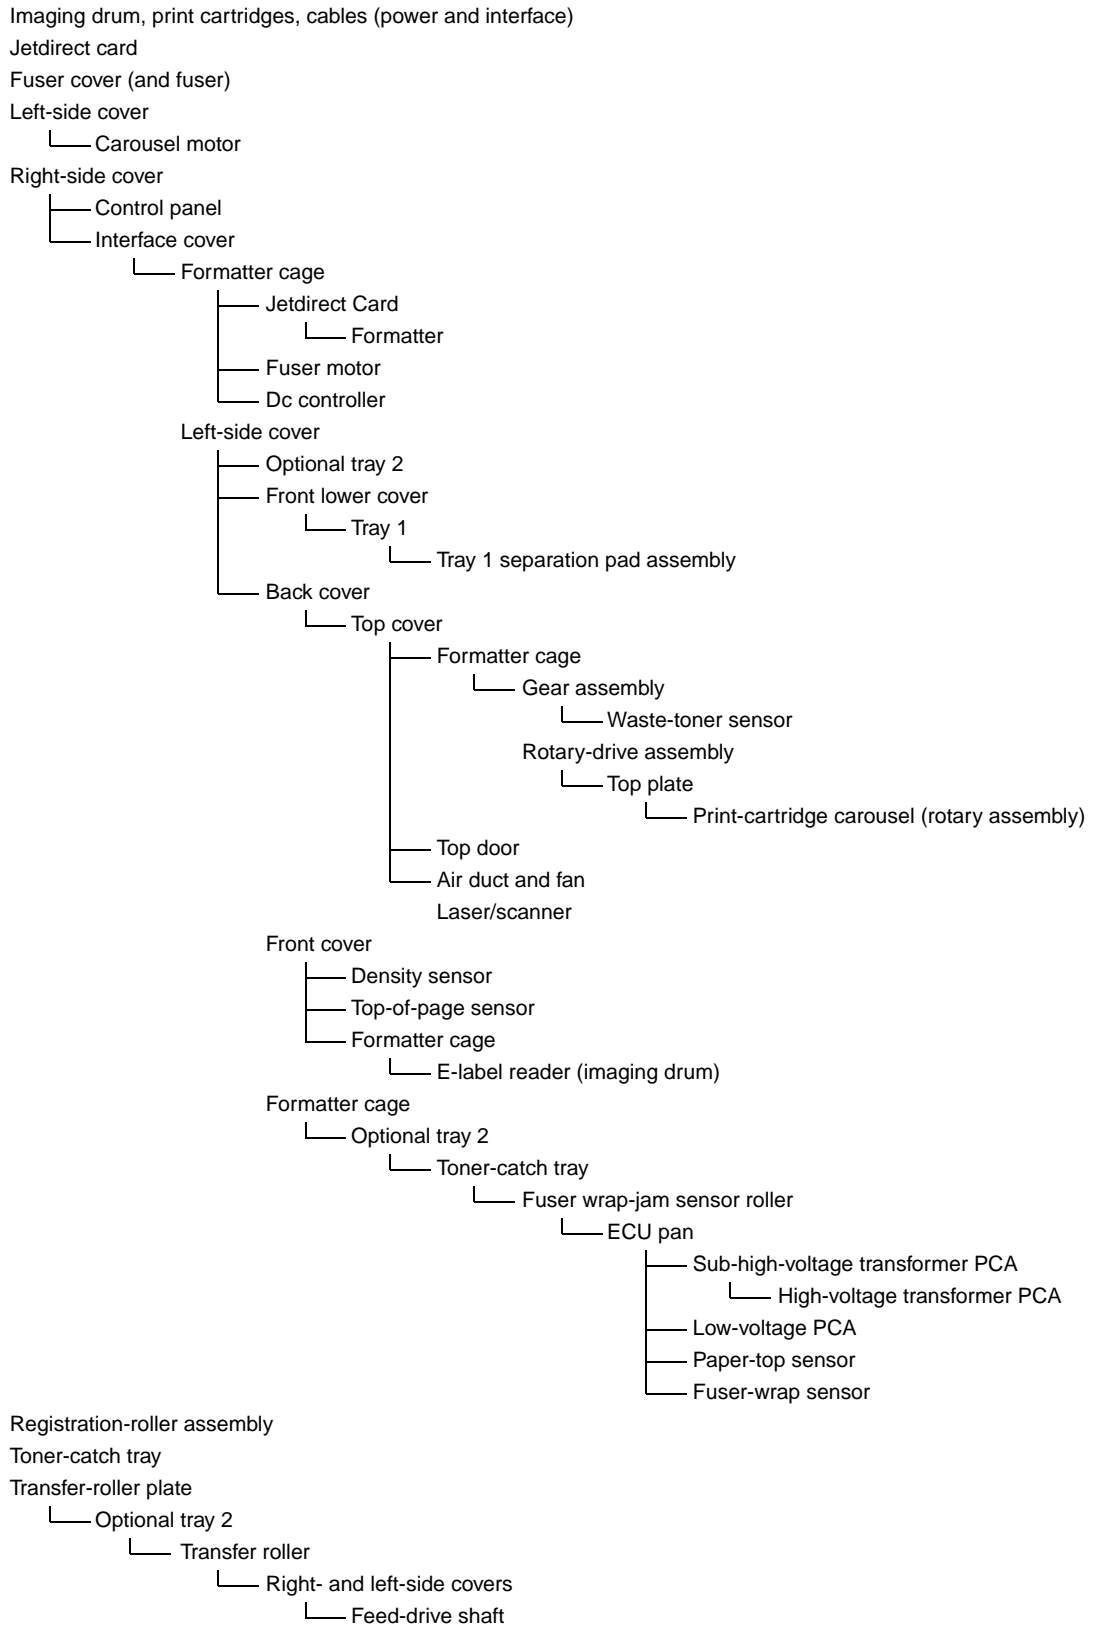

Before performing service

Pre-service procedures

- 1 Remove all media from the product.
- 2 Place the product on an ESD mat. If an ESD mat or an ESD-protected workstation is not available, discharge body static and ground the product chassis *before* servicing the product.
- 3 Remove the imaging drum (see page 90).
- 4 Remove the print cartridges (see page 91).
- 5 Unplug the power cord and the interface cable.
- 6 Lift the printer off of optional tray 3 (if installed).

Parts removal order

Use the following diagram to determine which parts must be removed before removing other parts.

Removal and replacement

Imaging drum

- 1 Open the top cover.
- 2 Grasp the imaging drum handle and then rotate the imaging drum until the handle is horizontal.
- 3 Lift the imaging drum straight up to remove it from the printer.

Note

Before you replace the imaging drum, wipe the clear plastic strip at the bottom of the opening of the printer with a soft, dry cloth to remove any dust or debris

Print cartridges

- 1 Open the top door.
- 2 Remove the imaging drum (see page 90).
- 3 Pinch together the two large blue tabs on the first cartridge and then lift the cartridge straight up to remove it from the carousel.
- 4 Close the top cover, and then press the **ROTATE CAROUSEL** button.
- 5 Open the top cover, and then remove the next cartridge following the procedure in step 3.
- 6 Repeat steps 2 through 5 until all four cartridges have been removed.

Note

When the top door is open, the carousel retracts but does not rotate.

If the print-cartridge carousel does not rotate, see page 204.

Jetdirect card

- 1 Turn the printer off.
- 2 Loosen two thumbscrews.
- 3 Slide the Jetdirect card out of the slot to remove it.

Fuser cover (and fuser)

- 1 Turn the printer off.
- 2 Rotate two locking tabs (callout 1) upward.
- 3 Gently slide the fuser out of the printer.

Figure 39. Removing the fuser cover (and fuser)

Right- and left-side covers

Follow the steps below to remove the right-side cover. Then, remove the left-side cover in the same manner.

- 1 Remove one screw (callout 1) from the lower edge of the cover.

Figure 40.

Removing the right-side cover (1 of 2)

- 2 Grasp the cover by the handle and by the top and then pull the cover out gently, rotating the cover away from the printer as you lift it.

CAUTION

To avoid breaking two internal tabs (see detail in figure 41), lift the cover straight up.

Figure 41.

Removing the right-side cover (2 of 2)

- 3 Repeat steps 1 and 2 to remove the left-side cover.

Reinstall note

Reattach the tab closer to the front of the printer before reattaching the back tab.

Control panel

- 1 Remove the right-side cover (see page 93).
- 2 Use a flatblade screwdriver to lift the plastic catch (callout 1) off of the tab.

Figure 42.

Removing the control panel (1 of 2)

- 3 Push the control panel away from the right-side cover to release three tabs (callout 2), and then continue pushing the control panel to remove it.

Figure 43.

Removing the control panel (2 of 2)

On-off switch

- 1 Remove the left-side cover (see page 93).
- 2 On the inside of the left-side cover, pinch two tabs (callout 1) together to remove the spring (callout 2).
- 3 Pinch the two tabs together, and then press them through the holes in the left-side cover to release the on-off switch.

Figure 44.

Removing the on-off switch

Interface cover

- 1 Remove the fuser (see page 92).
- 2 Release the tab (callout 1) at the top of the interface cover and the tab (callout 2) at the back cover.
- 3 Rotate the top of the interface cover away from the printer to remove the cover.

Figure 45.

Removing the interface cover

Formatter cage

- 1 Remove the following cover and assembly:
 - right-side cover (see page 93)
 - interface cover (see page 98)
- 2 Unplug the flat flexible cable (callout 1).
- 3 Use a flatblade screwdriver to pinch the tab on the cable connector (callout 2) to unplug the connector.

Note

You might find it easier to unplug the connector after you perform step 6.

- 4 Remove three screws (callout 3) from the formatter cage.

Figure 46. Removing the formatter cage (1 of 2)

- 5 Remove two screws (callout 4) from the formatter cage.
- 6 Rotate the formatter cage upward to remove it from two hooks (callout 5).

Figure 47.

Removing the formatter cage (2 of 2)

Formatter

- 1 Remove the following cover and assemblies:
 - right-side cover (see page 93)
 - interface cover (see page 98)
 - Jetdirect card (see page 91)
 - formatter cage (see page 99)
- 2 Remove six screws (callout 1) from the metal plate on the back of the formatter cage, and then remove the metal plate.
- 3 Lift the front edge (callout 2) of the formatter board upward to clear the tab (callout 3), and then pull the formatter out of the formatter cage.

Figure 48. Removing the formatter (1 of 2)

Reinstall note

It is possible to reinstall the formatter in such a way that the EIO cage is on the incorrect side of the metal tab on the formatter cage. Make sure that the EIO cage is in the correct position before replacing the six screws in the metal plate.

Correct

Incorrect

- 4 Release the tabs (callout 4) on the EIO cage and lift the EIO cage off of the formatter.

Figure 49.

Removing the formatter (2 of 2)

Reinstall note

Make sure that the metal clips (callout 5) on the interface connector are in the “open” position, perpendicular to the connector. If they are in the “closed” position when the formatter is reinstalled, they do not fit correctly through the hole in the formatter cage.

Fuser motor (J702)

- 1 Remove the following covers and assemblies:
 - right-side cover (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
- 2 Unplug one connector (callout 1).
- 3 Remove two screws (callout 2).
- 4 Slide the motor towards the rear of the printer and then pull it away from the printer.

Figure 50. Removing the fuser motor

Dc controller

- 1 Remove the following covers and assemblies:
 - right-side cover (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
- 2 Unplug the flat flexible cable (callout 1).
- 3 Release the cables from two cable-holders (callout 2)
- 4 Unplug one cable connector (callout 3) by pressing and releasing the tab on the side of the connector.
- 5 Unplug two cable connectors (callout 4) by releasing a clip on each connector (see the detail in the lower-left corner of figure 51).
- 6 Unplug the remaining 24 cable connectors.

Figure 51.

Removing the dc controller

- 7 Remove four screws (callout 5).
- 8 Lift the dc controller up and then away from the printer.

Figure 52. Removing the dc controller

Reinstall note

The connection that remains empty upon reinstallation is shown in callout 6. The connection is used to “flash” the dc controller.

Optional tray 2 (250-sheet tray)

- 1 Remove the right- and left-side covers (see page 93).
- 1 If optional tray 3 is installed, lift the printer (and optional tray 2) up and away from optional tray 3.
- 2 Remove one screw (callout 1) from optional tray 2.

Figure 53.

Removing optional tray 2 (1 of 2)

- 3 Remove one screw (callout 2) from the left side of the printer.
- 4 Remove two screws (callout 3) from the back of optional tray 2.
- 5 Grasp the printer frame on each side, and then carefully lift the printer off of tray 2.

Figure 54.

Removing optional tray 2 (2 of 2)

Carousel motor (J704)

- 1 Remove the left-side cover (see page 93).
- 2 Unplug one cable connector (callout 1).
- 3 Remove two screws (callout 2).
- 4 Rotate the motor counterclockwise to clear the metal lock-tab.
- 5 Lift the carousel motor away from the printer to remove it.

Figure 55.

Removing the carousel motor

Front lower cover

- 1 Remove the right- and left-side covers (see page 93).
- 2 Use the small flatblade screwdriver to lift the plastic catch (callout 1) off of the tab on the left side of the printer.
- 3 Pull the cover away from the printer to remove it.

Figure 56.

Removing the front lower cover

Back cover

- 1 Remove the right- and left-side covers (see page 93)
- 2 Use a flatblade screwdriver to release two internal tabs (callout 1), one at each side of the cover.
- 3 Rotate the top of the cover away from the printer and then downward to release the internal tabs under the cover.

Figure 57.

Removing the back cover

Top cover

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - back cover (see page 110)
- 2 Open the top door.
- 3 Press the small tab on the gear (callout 1) to release the gear.
- 4 Remove the gear to release the top-door rack (callout 2).

Figure 58. Removing the top cover (1 of 2)

Note Return the gear to its shaft after releasing the top door rack.

- 5 Remove three screws (callout 3) from the top cover.
- 6 Lift the top cover off of the printer.

Figure 59.

Removing the top cover (2 of 2)

Reinstall notes

Lift the vertical rack (callout 4) up to its highest position, and then align the notch on the gear with the lip on the top-door rack.

Top door

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - back cover (see page 110)
 - top cover (see page 111)
- 2 Turn the top cover over.
- 3 Firmly flex the top-door arm (callout 1) to release the plastic pin (callout 2) on either side.
- 4 Release the pin on the other side and slip the top door arms through the holes in the top cover.

Figure 60.

Removing the top door (1 of 2)

Reinstall note

Slide the door arm from one side through the hole in the top cover and into place before you attempt to reattach the other side.

- 5 Slide the top door rack (callout 3) off of its pin at the right side of the cover.

Figure 61.

Removing the top door (2 of 2)

Air duct and fan

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - back cover (see page 110)
 - top cover (see page 111)
- 2 Remove one connector (callout 1).
- 3 Release two tabs (callout 2).
- 4 Lift the air duct straight up to release two hidden tabs at the top of the air duct, and lift the air duct away from the printer.

Figure 62.

Removing the air duct

- 5 To remove the fan (callout 3) from the air duct, release two tabs on the side of the air duct that faces the printer and then lift the fan from the air duct.

Laser/scanner assembly

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - back cover (see page 110)
 - top cover (see page 111)
- 2 Unplug two cable connectors (callout 1), and unroute the cables from the cable holders.
- 3 Disconnect the flat flexible cable from the cable socket (callout 2) on the laser/scanner.
- 4 Rotate the lower part of the top output bin cover (callout 3) toward the front of the printer, and then lift away from the printer.
- 5 Remove four screws (callout 4).
- 6 Unroute the cables from the cable harness attached to the back of the laser/scanner.
- 7 Lift the laser/scanner assembly straight up to remove it from the printer.

Figure 63.

Removing the laser/scanner assembly

Reinstall note

When replacing the top output bin cover (callout 3 in figure 63), make sure that the guides are on the top output bin roller are on top of the cover.

Figure 64.

Reinstalling the top output bin cover

Front cover

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
- 2 Use a flatblade screwdriver to release two internal tabs (callout 1), one at each side of the printer.
- 3 Rotate the cover upward to release four internal tabs (callout 2) underneath the cover.

Figure 65.

Removing the front cover

Reinstall note

Make sure that the tabs on each side of the cover click into place.

Density sensor and top-of-page sensor

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
 - front cover (see page 118)
- 2 Press the tab (callout 1) on the sensor cover to release the cover, and then lift the cover up and away from the printer.

Figure 66.

Removing the density sensor cover

- 3 Unplug one connector (callout 2).
- 4 Remove the two screws (callout 3).
- 5 Lift the density sensor straight up to remove it from the printer.
- 6 Unplug one connector (callout 4) from the top-of-page sensor.
- 7 Remove one screw (callout 5) and then lift the top-of-page sensor straight up and away from the printer.

Figure 67.

Removing the density sensor

E-label reader (for imaging-drum E-labels)

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - front cover (see page 118).
- 2 Use the small flatblade screwdriver to lift two tabs, one on each side of the E-label reader housing.
- 3 Slide the E-label reader off of its rails.

Figure 68.

Removing the E-label reader (1 of 2)

- 4 Unplug the E-label reader connector (callout 2) from the dc controller.

Note

Examine the cable routing as you lift the E-label reader from the printer.

Figure 69. Removing the E-label reader (2 of 2)

Tray 1 (multipurpose tray)

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
 - front lower cover (see page 109)
- 2 Open tray 1.
- 3 Press the multipurpose-roller cover (not shown) inward toward the printer, and then grasp the top edge to remove it.
- 4 Lift tray 1 slightly to align the notch (callout 1) in the tray 1 cover (callout 2) with the hinge pins of the tray 1 hinges (callout 3).
- 5 Push the left tray 1 hinge to the right while pulling the tray 1 cover to the left to carefully disengage the hinge pin from the tray 1 cover.
- 6 Disengage the right tray 1 hinge (callout 4) from the tray 1 cover.
- 7 Close the tray 1 guide (callout 5), open the tray 1 cover, and then slide the tray 1 cover to the left to remove it from its pins.

Figure 70.

Removing tray 1 (1 of 2)

- 8 Disengage the left and right hinges from the tray 1 guide and then slide both of the hinges off of their keyed holes (callout 6) in the printer.
- 9 Use needle-nose pliers to unhook two springs (callout 7), one at each side of the tray 1 guide, and then remove the tray 1 guide.

Figure 71.

Removing tray 1 (2 of 2)

Reinstall note

The two springs should remain attached to two pegs inside the printer. If the springs are not attached, use needle-nose pliers to reattach them before reinstalling the tray 1 guide.

Tray 1 separation pad assembly

- 1 Remove tray 1 (see page 122).
- 2 Remove one screw (callout 1) from the separation pad assembly, and then remove the separation pad assembly.

Figure 72.

Removing the tray 1 separation pad assembly

Gear assembly

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - back cover (see page 110)
 - top cover (see page 111)
- 2 Disconnect one connector (callout 1, hidden—it is the connector to the main motor).
- 3 Disconnect two connectors (callout 2) from the dc controller.

Note

The dc controller is removed from the printer in figure 73. If it was not, then the connectors in callout 2 would still be attached to the dc controller.

- 4 Pinch the cable holder (callout 3) and then unwind the cable.

CAUTION

Do not attempt to disconnect the clutch cable from the clutch. Doing so can damage the cable.

- 5 Remove the e-clip (callout 4) from the clutch, and then pull the clutch away from the printer.
- 6 From inside the printer, press the small tab on the gear (see callout 1 in figure 58 on page 111) to disengage the inside and outside gears (callout 5) from each other.

Note

To reinstall the gear, lower the vertical rack (callout 6) to its lowest position, and then align the gear with the vertical rack.

Figure 73. Removing the gear assembly (1 of 2)

Note

Routing of the clutch cable is different in more recent versions of the printer from the routing shown in figure 73. Examine the routing to make sure that it is reinstalled correctly.

- 7 Remove eight screws (callout 6) from the gear plate.
- 8 Rotate the gear assembly away from the printer, beginning with the front edge.

Note

A grounding spring (callout 7, hidden) should remain attached to the printer chassis. If it does not, then either reattach it to the chassis or place it with the gear assembly to prevent misplacing it.

Figure 74. Removing the gear assembly (2 of 2)

Reinstall note

A grounding wire at the lower-back corner of the gear assembly must be hooked around the chassis at reinstallation. Callout 2 in figure 75 on page 127 shows the grounding wire. Callout 3 in figure 75 shows the grounding spring attached to the chassis.

Align the following parts with the printer chassis:

- gear assembly shaft
- grounding spring
- grounding wire

Waste-toner sensor

- 1 Unroute the cable from several cable holders.
- 2 Remove one screw (callout 1).
- 3 Lift the waste toner-sensor away from the printer.

Note

Callout 2 shows the grounding wire that must be hooked around the printer chassis upon reinstallation of the gear assembly. Callout 3 shows the grounding spring.

Figure 75.

Removing the waste toner sensor

Rotary-drive assembly

Note

The rotary-drive assembly includes the developer motor, the brake solenoid, and the encoder motor.

- 1 Remove the following covers:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - back cover (see page 110)
 - top cover (see page 111)
- 2 Unplug three cable connectors (callout 1) from the dc controller and unplug the flat laser/scanner cable (callout 2) from the laser/scanner.

Figure 76. Removing the rotary-drive assembly (1 of 3)

- 3 Remove one screw (callout 3) from the motor.
- 4 Remove one of the four screws that secures the rotary-drive assembly to the chassis (callout 4).

Figure 77. Removing the rotary-drive assembly (2 of 3)

- 5 Face the top of the printer, and remove the other three screws that secure the rotary-drive assembly to the chassis (callout 5).
- 6 Lift the rotary-drive assembly straight up to remove it from the printer.

Figure 78.

Removing the rotary-drive assembly (3 of 3)

Reinstall note

Insert the metal protrusion at the back of the rotary-drive assembly into the slot in the rear frame assembly and then lower the rotary-drive assembly into position over the alignment pins. Make sure that cables are not pinched.

Top plate

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - back cover (see page 110)
 - top cover (see page 111)
- 2 Remove the air duct (see page 115).
- 3 Unplug the flat flexible cable (callout 1) from the laser/scanner.
- 4 Release the cables from one cable-holder (callout 2).
- 5 Unplug one cable connector (callout 3) by pressing and releasing the tab on the side of the connector.
- 6 Unplug five connectors (callout 4) from the dc controller.

Figure 79. Removing the top plate (1 of 2)

- 7 Unroute two cables (callout 5).

Note

Examine the routing of the cables. If the cables are not reinstalled to their correct routing, then the cables can become pinched by other assemblies.

- 8 Unplug two connectors (callout 6).
- 9 Remove two screws at the left side of the printer (callout 7) and then remove the two corresponding screws from the right side of the printer.

Figure 80.

Removing the top plate

10 Remove four screws (callout 8) from the top plate.

Figure 81.

Removing the top plate (3 of 3)

11 Carefully lift the top plate off of the printer frame.

Print-cartridge carousel

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - back cover (see page 110)
 - top cover (see page 111)
 - air duct (see page 115)
 - rotary-drive assembly (see page 128)
 - top plate (see page 131)
- 2 Remove two screws (callout 1) from the back of the printer.

Figure 82.

Removing the print-cartridge carousel (1 of 5)

Reinstall note

Because the remainder of the print-cartridge carousel removal procedures are performed from the left, right, and front of the printer, it is easy to forget to replace the two screws at the back of the printer.

- 3 Press the white plastic tab (callout 2) at the left side of the printer to release the left swing-shaft bushing, and then rotate the bushing to a vertical position.

Figure 83.

Removing the print-cartridge carousel (2 of 5)

- 4 On the right side of the printer, perform the action described in step 3 on the black, right swing-shaft bushing.

CAUTION

The right swing-shaft bushing is thin and delicate and is easily broken. Be very careful in rotating the bushing in either direction.

Examine the positions of the left pressure-shaft holder (callout 3), the right pressure-shaft holder (callout 4), and the pressure-shaft gear (callout 5) before you perform step 5. The pressure-shaft holders must be reinstalled to their correct positions when reinstalling the print-cartridge carousel.

- 5 Use the flatblade screwdriver to pry two white tabs on the pressure-shaft holders from their seated positions in the rear frame assembly.

Figure 84.

Removing the print-cartridge carousel (3 of 5)

- 6 Lift the print-cartridge carousel out of the printer.

Reinstall notes

Make sure that the “feet” of the pressure-shaft holders fit into the slots in the rear frame assembly. After the “feet” reinstalled correctly, press the tops of the white tabs firmly into position.

Correct

Incorrect

Also make sure that the tab on the pressure-shaft gear points down.

Check to see that the gears in the print-cartridge carousel are aligned correctly before placing the carousel back into the printer.

- 1 Rotate the carousel so that the marker for the yellow print cartridge faces the front of the printer.
- 2 Examine the gears: two marks on the smaller gear should line up with the single mark on the larger gear (see the detail of the gears in figure 85).

Note

The single mark on the larger gear is adjacent to the slot for the black cartridge, marked with a "K."

- 3 If the gears are not aligned correctly, locate the marks on the gears and realign the gears.

Figure 85.

Reinstalling the print-cartridge carousel

Registration-roller assembly

- 1 Remove two screws (callout 1) from the registration-shutter assembly.
- 2 Rotate the registration-roller assembly toward the front of the printer and then lift it towards the rear of the printer and up to remove it from the printer.

Figure 86.

Removing the registration-roller assembly

Toner-catch tray

The toner-catch tray is secured by two tabs underneath the tray, towards the front of the tray.

- 1 Release one tab on either side of the toner-catch tray and then pull the tray approximately two or three millimeters (approximately 0.125 inches) towards the front of the printer to make sure that the tab doesn't re-catch.
- 2 Release the tab on the other side and then lift the tray out of the printer.

Figure 87.

Removing the toner-catch tray

Transfer-roller plate

CAUTION

Do not touch the black sponge portion of the transfer roller.

- 1 Remove the toner-catch tray (see page 140).
- 2 Remove two screws (callout 1) from the transfer-roller plate.
- 3 Lift the transfer-roller plate straight up to remove it from the printer.

Figure 88.

Removing the transfer-roller plate

Transfer roller

CAUTION

Do not touch the black sponge portion of the transfer roller.

- 1 Remove the following covers and assemblies:
 - toner-catch tray (see page 140)
 - transfer-roller plate (see page 141)
- 2 Use needle-nose pliers to gently squeeze the small tabs at the right side of the transfer roller (see the detail in figure 89) and then also squeeze the tabs at the left side of the transfer roller to release the roller.

Note

Be careful not to bend the thin metal strip adjacent to the tabs on the right side of the roller.

- 3 Lift the transfer roller up from the right side, slide it to the right, and lift it out of the printer.

Note

The small grounding spring that is underneath the left side of the transfer roller is attached to the transfer roller. It is removed with the transfer roller.

The small grounding spring that is underneath the right side of the transfer roller remains in the chassis.

Figure 89.

Removing the transfer roller

Feed-drive shaft

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - toner-catch tray (see page 140)
 - transfer-roller plate (see page 141)
 - transfer roller (see page 142)
- 2 Remove one screw (callout 1) from the gear cover, and then lift the gear cover to remove it.
- 3 Lift the belt roller (callout 2) from its hooks.
- 4 Use a small flatblade screwdriver to pry the feed-drive shaft (callout 3) off of the hooks that secure it to the printer.

Note

Unless the feed-drive shaft itself is damaged, there is no need to remove the shaft.

- 5 Use a small flatblade screwdriver to pry four pulleys (callout 4) from their hooks.
- 6 After the feed-drive shaft and the pulleys are released, remove timing belt (callout 5) and the small feed belts by sliding them off of the right end of the feed-drive shaft.

Note

Callout 6 shows the roller on the fuser wrap-jam sensor. The roller must be removed first if you want to remove the ECU pan (the bottom plate of the printer).

Figure 90.

Removing the feed-drive shaft

Reinstall note

Examine the timing belt (callout 5) before removing it from the printer. The leading and trailing sides of the ridges are different and the belt must be reinstalled correctly to prevent media-feed problems.

ECU pan

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - optional tray 2 (see page 106)
 - toner-catch tray (see page 140)
- 2 Unplug five cable connectors (callout 1) from the dc controller.
- 3 Remove one screw (callout 2) from the grounding wire.

Figure 91.

Removing the ECU pan (1 of 2)

- 4 Turn the printer over so that it rests on its top.
- 5 Remove one screw from the left side of the printer (callout 3)
- 6 Remove eight screws (callout 4) from the bottom of the ECU pan.
- 7 Lift the ECU pan off of the printer.

Figure 92.

Removing the ECU pan (2 of 2)

Reinstall note: ECU connections

Make sure that the grounding springs are attached to each of the eight ECU connections before reinstalling the ECU pan.

Figure 93.

ECU connections

Sub-high-voltage transformer PCA

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - optional tray 2 (see page 106)
 - fuser (see page 92)
 - ECU pan
- 2 Unplug one connector (callout 1) from the high-voltage transformer PCA.
- 3 Remove two screws (callout 2).
- 4 Lift up the sub-high-voltage transformer PCA and its holder, and then unplug one connector (callout 3) from the high-voltage transformer PCA.

Figure 94.

Removing the sub-high-voltage transformer PCA

High-voltage transformer PCA

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - optional tray 2 (see page 106)
 - ECU pan (see page 144)
 - Sub-high-voltage transformer PCA (see page 147)
- 2 Release two cable holders (callout 1) and then unplug two connectors (callout 2).
- 3 Remove two screws (callout 3).
- 4 Pinch six plastic pins (callout 4) and then lift the high-voltage transformer PCA off of the ECU pan.

Figure 95.

Removing the high-voltage transformer PCA

Low-voltage PCA

- 1 Remove the following covers and assemblies:
 - right- and left-side covers (see page 93)
 - interface cover (see page 98)
 - formatter cage (see page 99)
 - optional tray 2 (see page 106)
 - ECU pan (see page 144)
- 2 Unplug four connectors (callout 1) from the low-voltage PCA.
- 3 Remove one screw (callout 2) from the grounding wire.
- 4 Remove two screws (callout 3) from the fuser-connector holder and lift the holder off of the low-voltage PCA.

Figure 96. Removing the low-voltage PCA (1 of 2)

- 5 Remove six screws (callout 4) from the low-voltage PCA, and then lift the PCA off of the ECU pan.

Figure 97. Removing the low-voltage PCA (2 of 2)

Paper-top sensor

- 1 Remove the ECU pan (see page 118).
- 2 Remove one screw (callout 1).
- 3 Lift the paper-top sensor straight up to remove it from the printer.
- 4 Unwind the cable from the cable harness, and unplug the cable from the dc controller.

CAUTION

Do not attempt to disconnect the paper-top sensor cable from the paper-top sensor. Doing so can damage the cable.

Figure 98. Removing the paper-top sensor

Fuser-wrap sensor

- 1 Remove the ECU pan (see page 144).
- 2 Remove the fuser-wrap sensor roller (see figure 90 on page 143, callout 6).
- 3 Remove one screw (callout 1) from the fuser-wrap sensor.
- 4 Unwind the cable from the cable harness, and unplug the cable from the dc controller.

Figure 99.

Removing the fuser wrap sensor

250-sheet feeder pickup roller

- 1 Remove all paper from the 250-sheet feeder and then remove the 250-sheet feeder from the printer.
- 2 Press down the lift plate and pull the tray out of the feeder.
- 3 Turn the feeder upside-down.
- 4 Use a flatblade screwdriver to disengage the white, plastic lever, and then rotate the lever towards the front of the feeder to release the roller.
- 5 Lift the pickup roller up to remove it.

Figure 100. Removing the 250-sheet feeder pickup roller

250-sheet feeder cover

- 1 Use a flatblade screwdriver to release two tabs (callout 1).
- 2 Lift the cover up and away from the 250-sheet feeder.

Figure 101. Removing the 250-sheet feeder cover

250-sheet feeder PCA

- 1 Press the small tab to release one connector (callout 1).
- 2 Unplug the other three connectors (callout 2).
- 3 Remove one screw (callout 3) and lift the 250-sheet feeder PCA from the feeder.

Figure 102.

Removing the 250-sheet feeder PCA

500-sheet feeder pickup roller

- 1 Lift the printer off of the 500-sheet feeder.
- 2 Remove all paper from the 500-sheet feeder.
- 3 Press down the lift plate and pull the tray out of the feeder.
- 4 Turn the feeder so that it rests on its back side.
- 5 Insert the flatblade screwdriver into the slot (callout 1) on the right roller-shaft cover and then pry the cover off of the feeder.
- 6 Insert the flatblade screwdriver into the slot (callout 2) on the left roller-shaft cover and then pry the cover off of the feeder.

Figure 103.

Removing the 500-sheet feeder pickup roller (1 of 2)

- 7 Use the flatblade screwdriver to disengage the white, plastic lever (callout 3), and then rotate the tab towards the front of the tray to release the roller.
- 8 Lift up the pickup roller to remove it.

Figure 104.

Removing the 500-sheet feeder pickup roller (2 of 2)

500-sheet feeder cover

- 1 Turn the 500-sheet feeder so that it rests on its feet.
- 2 Use the flatblade screwdriver to pry up the cover, clearing two tabs (callout 1).
- 3 Rotate the cover away from the feeder to remove it.

Figure 105.

Removing the 500-sheet feeder cover

500-sheet feeder motor

- 1 Unplug one connector (callout 1) from the motor.
- 2 Remove two screws (callout 2) and then lift the motor from the feeder

Figure 106.

Removing the 500-sheet feeder motor

Basic troubleshooting

Table 20. Basic troubleshooting

#	Verification steps	Possible problems	Solutions
1	Does the printer turn on successfully? When the printer is connected to a grounded power source, the control panel lights should cycle one after another and the cartridge carousel should rotate.	No power.	1. Verify that the printer is plugged in. 2. Verify that the power cable is functional and that the power on-off switch is on.
		Control panel lights do not cycle.	Verify that the control panel cable is seated into both the control panel and the formatter. If the cable is connected correctly, replace the control panel.
2	Is the printer ready? The printer should function without error-indicator light messages appearing on the control panel or error messages appearing on the Printer Status and Alerts screen.	Control panel lights, other than the Ready light, are on or blinking.	Consult the lists of control panel light messages on page 169 to identify and correct the error.
		An error message appears in the Printer Status and Alerts screen.	See "Resolving problems that generated messages" on page 194.
		There is a problem, but no control panel lights are on or blinking, and no messages appear on the Printer Status and Alerts screen.	See "Resolving problems that did not generate messages" on page 195.
3	Do engine tests and information pages print? Print an engine test (see page 205). The engine test should print without paper-feed problems or print-quality problems. Also print a Demo page or a configuration page (see page 210).	Note	The formatter must be connected to a power source to perform an engine test.
		The engine test is not successful.	
		An error-indicator light message appears on the control panel.	Consult the lists of control panel light messages on page 169 to identify and correct the error.
		Printer Status and Alerts software generates an error message.	See "Resolving problems that generated messages" on page 194.
		Poor print quality.	See "Solving image-quality problems" on page 183.
4	Is the software installed correctly?	Software is not installed or an error occurred during software installation.	Uninstall and then reinstall the printer software. Make sure that you use the correct installation procedure and the correct port setting.

Table 20. Basic troubleshooting

#	Verification steps	Possible problems	Solutions
5	Does the printer print from the computer? Connect the parallel cable or USB cable to the printer and to the computer. Use a word-processing application to send a print job to the printer.	A USB cable and a parallel cable are both connected to the printer.	When both cables are connected, the USB automatically disables itself. Disconnect both cables and then reinstall the one you want to use.
		The cable is not connected correctly.	Reconnect the cable.
		An incorrect printer driver is selected.	Reset the printer driver. (Check for the correct port setting.)
		Other devices are connected to the parallel port.	Disconnect the other devices and try to print again.

Clearing jams

Occasionally, paper or other print media can become jammed during a print job. Causes include the following:

- Input trays are loaded improperly or are overfilled.
- Optional tray 2 or optional tray 3 is removed during a print job.
- The top cover is opened during a print job.
- Too many sheets have accumulated in an output area or blocked an output area.
- The media being used does not meet HP specifications. See the user guide for information about print-media specifications.
- The environment in which the paper was stored is too humid or too dry. See the user guide for information about print-media specifications.
- Non-HP supplies are installed in the printer.

Where to look for jams

Jams can occur in these locations:

- Inside the printer. See “To clear jams from inside the printer” on page 165.
- In input areas. See “To clear jams from input areas” on page 166.
- In output areas. See “To clear jams from output areas” on page 167.

Find and remove the jam by using the instructions on the following pages. If the location of the jam is not obvious, look first inside the printer.

Loose toner might remain in the printer after a jam. This problem should resolve itself after a few sheets have printed. See “Loose toner” on page 187.

1

2

3

4

To clear jams from inside the printer

CAUTION

Jams in this area might result in loose toner on the page. If you get toner on your clothes or hands, wash them in cold water. (Hot water will set the toner into the fabric.)

- 1 Open the top cover.
- 2 Remove the *imaging drum* by pushing it away from you and lifting it out of the printer.

Note

You *cannot* reach jams by removing the print cartridges.

- 3 Complete one of these steps:
 - If the leading edge or the trailing edge of the paper is visible, carefully pull the paper out of the printer.
 - If the paper is too difficult to remove, remove the jam as described in "To clear jams from output areas" on page 167.
- 4 After the jam has been removed, replace the imaging drum and close the top cover.
- 5 Press  (Go) if the Go light is blinking. If the Attention light is still blinking, then another jam is present. See "To clear jams from input areas" on page 166 and "To clear jams from output areas" on page 167.

1**2****3****4****5**

To clear jams from input areas

- 1 Open optional tray 2 or optional tray 3 to expose the jam.
- 2 Complete one of these steps:
 - If the jam has already partially entered the printer, see “To clear jams from inside the printer” on page 165.
 - If the jam is only in the input tray, remove the jam by pulling it out by the visible edge. Realign all of the paper in the tray and proceed to step 4.
- 3 If you could not remove the jam from inside the printer or by pulling it out of the tray, grasp the jam from the outside of the printer and carefully pull it free.
- 4 Push the paper down to lock the metal lift plate into place (tray 2 only) and slide the tray back into the printer.
- 5 Open the top cover, close it again, and then press  (Go) if the Go light is blinking. If the Attention light is still blinking, then another jam is present. See “To clear jams from inside the printer” on page 165 and “To clear jams from output areas” on page 167.

1

To clear jams from output areas

CAUTION

Jams in these areas might result in loose toner on the page. If you get toner on your clothes or hands, wash them in cold water. (Hot water will set the toner into the fabric.)

2

1 Complete one of these steps:

- If the paper is not almost completely visible from the top output bin, proceed to step 2.
- If the paper is almost completely visible, pull it carefully out of the printer and proceed to the step 9.

2 Open the rear output door.

3

3 If the leading edge of the paper is visible from the rear opening, carefully pull the paper out.

4 If the jam is too far into the printer to remove, turn off the printer and disconnect the power cable.

CAUTION

Always turn off the printer and disconnect the power cable before you remove the fuser.

4

5 Rotate the locks on the fuser to the unlocked position.

5

6

- 6 Grasp the fuser handles and pull to remove the fuser from the printer.

WARNING!

The parts on the internal surface of the fuser are very hot. To avoid burning yourself, do not touch those parts.

7

- 7 Using both hands, slowly and steadily remove any paper from inside the printer. Then, carefully reinsert the fuser and secure the locks.
- 8 Reconnect the power cable and turn on the printer.
- 9 Open the top cover, close it again, and then press  (Go) if the Go light is flashing. If the Attention light is still blinking, then there is another jam. See "To clear jams from inside the printer" on page 165 and "To clear jams from input areas" on page 166.

Control panel light messages

Note For non-error status messages, see “Supplies Status lights” on page 170 and “Printer Status lights” on page 174.

Each error message is listed in the following tables along with possible causes and steps to resolve the identified errors.

You can also see the embedded Web server for a text message that correlates with the light pattern. Or, see the HP Color LaserJet 2500 Series Toolbox to view animations of the light patterns and to see their messages.

Figure 107. Control panel lights

Table 21. Control panel lights legend

Light symbol	Meaning of symbol
	Light off
	Light on
	Light blinking

Supplies Status lights

This section describes the meaning of the patterns for the lights in the Supplies Status area. Information about supplies also appears in the Printer Status and Alerts software, the embedded Web server, and the HP Color LaserJet 2500 Series Toolbox. For more information about how to use and view the embedded Web server, see page 41.

Table 22. Supplies Status light messages

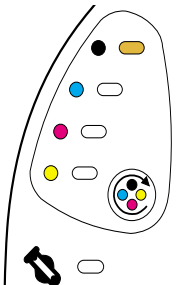

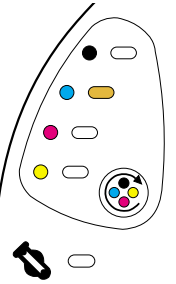

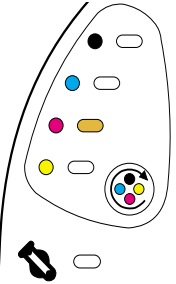

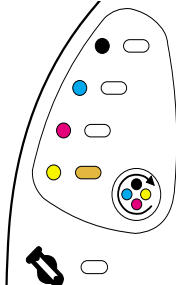

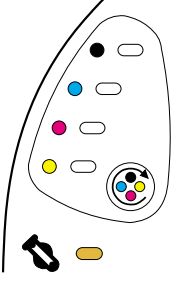

Message	Possible causes	Solutions
	<p>The black-print-cartridge light is on.</p> <p>The black print cartridge is low.</p>	<ol style="list-style-type: none"> 1. The printer continues to print without any action required until the print cartridge is empty. 2. Order a new print cartridge.
	<p>The cyan-print-cartridge light is on.</p> <p>The cyan print cartridge is low.</p>	<ol style="list-style-type: none"> 1. The printer continues to print without any action required until the print cartridge is empty. 2. Order a new print cartridge.
	<p>The magenta-print-cartridge light is on.</p> <p>The magenta print cartridge is low.</p>	<ol style="list-style-type: none"> 1. The printer continues to print without any action required until the print cartridge is empty. 2. Order a new print cartridge.
	<p>The yellow-print-cartridge light is on.</p> <p>The yellow print cartridge is low.</p>	<ol style="list-style-type: none"> 1. The printer continues to print without any action required until the print cartridge is empty. 2. Order a new print cartridge.
	<p>The imaging-drum light is on.</p> <p>The imaging drum is low.</p>	<ol style="list-style-type: none"> 1. The printer continues to print without any action required until the imaging drum fails. 2. Order a new imaging drum.

Table 22. Supplies Status light messages (continued)

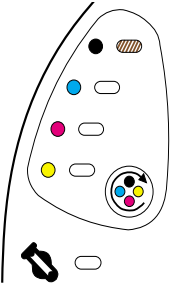

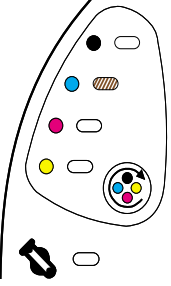

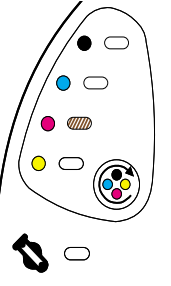

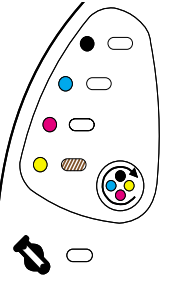

Message	Possible causes	Solutions
 <p>The black-print-cartridge light is blinking, and the printer stops printing.</p>	<ul style="list-style-type: none"> • The print cartridge is empty or missing. • The printer cannot detect the print cartridge correctly. 	<ol style="list-style-type: none"> 1. Reinsert or replace the print cartridge. 2. If the print-cartridge light is still blinking but the Attention light is not on, turn the printer off and then back on. 3. If the problem persists, repeat the above steps with black print cartridges until the error is resolved. 4. If the problem persists, replace the print-cartridge E-label reader, which is located on the pressure assembly of the print-cartridge carousel.
 <p>The cyan-print-cartridge light is blinking, and the printer stops printing.</p>	<ul style="list-style-type: none"> • The print cartridge is empty or missing. • The printer cannot detect the print cartridge correctly. 	<ol style="list-style-type: none"> 1. Reinsert or replace the print cartridge. 2. If the print-cartridge light is still blinking but the Attention light is not on, turn the printer off and then back on. 3. If the problem persists, repeat the above steps with cyan print cartridges until the error is resolved. 4. If the problem persists, replace the print-cartridge E-label reader, which is located on the pressure assembly of the print-cartridge carousel.
 <p>The magenta-print-cartridge light is blinking, and the printer stops printing.</p>	<ul style="list-style-type: none"> • The print cartridge is empty or missing. • The printer cannot detect the print cartridge correctly. 	<ol style="list-style-type: none"> 1. Reinsert or replace the print cartridge. 2. If the print-cartridge light is still blinking but the Attention light is not on, turn the printer off and then back on. 3. If the problem persists, repeat the above steps with magenta print cartridges until the error is resolved. 4. If the problem persists, replace the print-cartridge E-label reader, which is located on the pressure assembly of the print-cartridge carousel.
 <p>The yellow-print-cartridge light is blinking, and the printer stops printing.</p>	<ul style="list-style-type: none"> • The print cartridge is empty or missing. • The printer cannot detect the print cartridge correctly. 	<ol style="list-style-type: none"> 1. Reinsert or replace the print cartridge. 2. If the print-cartridge light is still blinking but the Attention light is not on, turn the printer off and then back on. 3. If the problem persists, repeat the above steps with yellow print cartridges until the error is resolved. 4. If the problem persists, replace the print-cartridge E-label reader, which is located on the pressure assembly of the print-cartridge carousel.

Table 22. Supplies Status light messages (continued)

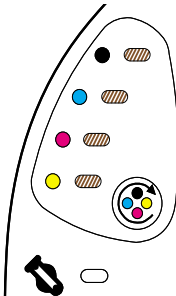

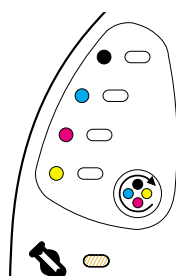

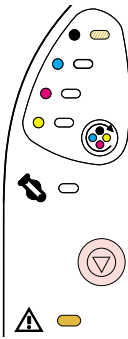

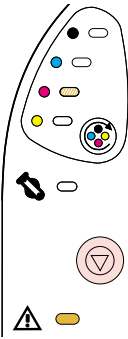

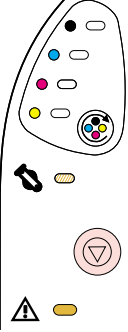

Message	Possible causes	Solutions
	<p>The four print-cartridge lights are blinking, and the printer stops printing.</p> <ul style="list-style-type: none"> • The print cartridges are empty or missing. • The printer cannot detect the print cartridges correctly. 	<ol style="list-style-type: none"> 1. Replace any non-HP print cartridges with HP print cartridges. 2. Reinsert or replace the print cartridges. 3. If the print-cartridge lights are still blinking but the Attention light is not on, turn the printer off and then back on. 4. If the problem persists, repeat the above steps with sets of print cartridges until the error is resolved. 5. If the problem persists, replace the print-cartridge E-label reader, which is located on the pressure assembly of the print-cartridge carousel.
	<p>The imaging-drum light is blinking, and the printer stops printing.</p> <ul style="list-style-type: none"> • The imaging drum is empty or missing. • The printer cannot detect the imaging drum correctly. 	<ol style="list-style-type: none"> 1. Reinsert or replace the imaging drum. 2. If the imaging-drum light is still blinking but the Attention light is not on, turn the printer off and then back on. 3. If the problem persists, repeat the above steps with imaging drums until the error is resolved. 4. If the problem persists, replace the imaging-drum E-label reader (see page 120).
	<p>The black-print-cartridge light is blinking and the Attention light is on. The printer stops printing.</p> <p>The black print cartridge is a non-HP print cartridge.</p> <p>CAUTION: If you continue printing after this print cartridge is empty, the printer can be damaged. See “Hewlett-Packard limited warranty statement” on page 23.</p>	<p>If you still want to use this non-HP print cartridge, press  (CANCEL JOB) to continue printing.</p> <p>NOTE: You will not receive any indication from the printer Supplies Status lights, the Supplies Status page, or any software component (HP Color LaserJet 2500 Series Toolbox, Printer Status and Alerts, or embedded Web server) when this print cartridge is low or empty.</p>
	<p>The cyan-print-cartridge light is blinking and the Attention light is on. The printer stops printing.</p> <p>The cyan print cartridge is a non-HP print cartridge.</p> <p>CAUTION: If you continue printing after this print cartridge is empty, the printer can be damaged. See “Hewlett-Packard limited warranty statement” on page 23.</p>	<p>If you still want to use this non-HP print cartridge, press  (CANCEL JOB) to continue printing.</p> <p>NOTE: You will not receive any indication from the printer Supplies Status lights, the Supplies Status page, or any software component (HP Color LaserJet 2500 Series Toolbox, Printer Status and Alerts, or embedded Web server) when this print cartridge is low or empty.</p>

Table 22. Supplies Status light messages (continued)

Message	Possible causes	Solutions
 <p>The magenta-print-cartridge light is blinking and the Attention light is on. The printer stops printing.</p>	<p>The magenta print cartridge is a non-HP print cartridge.</p> <p>CAUTION: If you continue printing after this print cartridge is empty, the printer can be damaged. See “Hewlett-Packard limited warranty statement” on page 23.</p>	<p>If you still want to use this non-HP print cartridge, press  (CANCEL JOB) to continue printing.</p> <p>NOTE: You will not receive any indication from the printer Supplies Status lights, the Supplies Status page, or any software component (HP Color LaserJet 2500 Series Toolbox, Printer Status and Alerts, or embedded Web server) when this print cartridge is low or empty.</p>
 <p>The yellow-print-cartridge light is blinking and the Attention light is on. The printer stops printing.</p>	<p>The yellow print cartridge is a non-HP print cartridge.</p> <p>CAUTION: If you continue printing after this print cartridge is empty, the printer can be damaged. See “Hewlett-Packard limited warranty statement” on page 23.</p>	<p>If you still want to use this non-HP print cartridge, press  (CANCEL JOB) to continue printing.</p> <p>NOTE: You will not receive any indication from the printer Supplies Status lights, the Supplies Status page, or any software component (HP Color LaserJet 2500 Series Toolbox, Printer Status and Alerts, or embedded Web server) when this print cartridge is low or empty.</p>
 <p>The imaging-drum-light is blinking and the Attention light is on. The printer stops printing.</p>	<p>The imaging drum is a non-HP imaging drum.</p> <p>CAUTION: If you continue printing after this imaging drum is empty, the printer can be damaged. See “Hewlett-Packard limited warranty statement” on page 23.</p>	<p>If you still want to use this non-HP imaging drum, press  (CANCEL JOB) to continue printing.</p> <p>NOTE: You will not receive any indication from the printer Supplies Status lights, the Supplies Status page, or any software component (HP Color LaserJet 2500 Series Toolbox, Printer Status and Alerts, or embedded Web server) when this imaging drum is low or empty.</p>

Printer Status lights

The following section describes the meaning of the light patterns in the Printer Status area. Information about the printer status also appears in the Printer Status and Alerts software and the embedded Web server. For more information about how to use and view the embedded Web server, see page 41.

Several errors have secondary light patterns, which provide more information about the specific type of error that occurred. The following errors types have secondary light patterns:

- Attention with Ability to Continue errors (see page 177)
- Accessory errors (see page 179)
- Service errors (see page 181)

Table 23. Printer Status light messages

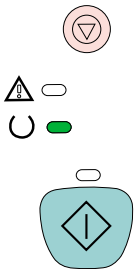

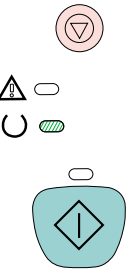

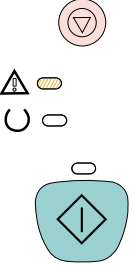

Message	Possible causes	Solutions
<p>All control panel lights</p> 	<p>All control panel lights cycle one after another.</p> <p>The printer is in Startup state.</p>	<p>Pressing buttons has no effect until the printer is in the Ready state.</p>
	<p>The Ready (green) light is on and the printer is ready to print.</p> <p>The printer is in Ready state.</p>	<ul style="list-style-type: none"> ● No action is needed. ● Pressing  (Go) prints a Demo page. ● Pressing  (Go) and  (CANCEL JOB) simultaneously prints a Configuration page and a Supplies Status page, as well as an HP Jetdirect page if an HP Jetdirect print server card is installed.
	<p>The Ready (green) light is blinking.</p> <p>The printer is receiving or processing data.</p>	<p>Pressing  (CANCEL JOB) cancels the current job. One or two pages might print as the printer clears the print job. The printer returns to the Ready state (Ready light on) after the job has been canceled.</p>
	<p>The Attention (amber) light is blinking.</p> <p>Attention error. The top cover is open.</p> <p>Attention error. The printer is out of media.</p> <p>Attention error. The printer has a jam.</p>	<p>Close the top cover.</p> <p>Load media.</p> <ol style="list-style-type: none"> 1. Clear the jam (see pages 164 through 168). 2. If the location of the jam is not apparent, check the embedded Web server to find the jam location. <ul style="list-style-type: none"> ● If the jam was under the imaging drum, toggle the registration sensor to check its movement and replace the registration sensor if it does not move freely. ● If the jam was in the fuser area, toggle the fuser exit sensor to check its movement and replace the fuser exit sensor if it does not move freely.

Table 23. Printer Status light messages (continued)

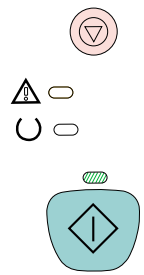

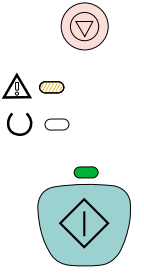

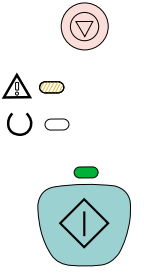

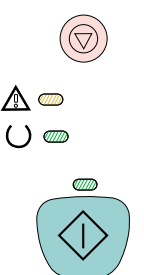

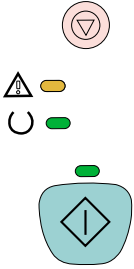

Message	Possible causes	Solutions
	<p>The Go (green) light is blinking.</p> <ul style="list-style-type: none"> The top cover has been opened and then closed You pressed  (ROTATE CAROUSEL). 	<ul style="list-style-type: none"> Pressing  (Go) returns the printer to the Ready state. If you do not press  (Go), the printer automatically returns to the Ready state after approximately 10 seconds. Pressing  (ROTATE CAROUSEL) brings another print cartridge to the top position.
	<p>The Attention light is blinking and the Go light is on. The printer stops printing.</p>	<p>A manual-feed job was sent to the printer, and the printer is waiting for the special media.</p> <ol style="list-style-type: none"> Load media into tray 1. If the printer does not begin printing after the pages have been reloaded, press  (Go). Or, just press  (Go) to try to print from another tray if another tray is installed.
	<p>The printer has finished printing the first side of a manual-duplex job, and the printer is waiting for the pages to be reloaded so it can print the second side.</p>	<ol style="list-style-type: none"> Reload the pages. If the printer does not begin printing after the pages have been reloaded, press  (Go).
	<p>Someone is trying to print by Source (tray) and there is no paper in the selected tray.</p>	<ul style="list-style-type: none"> Add paper to the selected tray to print from it. Press  (Go) to try to print from another tray.
	<p>The print image is larger than the size of media in the tray.</p>	<p>Load the correct-size media and press  (Go).</p>
	<p>The printer has an Attention with Ability to Continue error.</p>	<ol style="list-style-type: none"> Press  (Go) for the printer to attempt to recover from the error and print whatever data it can. If successful, the printer completes the job while the Ready light blinks. If unsuccessful, the Attention with Ability to Continue message continues to appear. Perform one of these steps: <ul style="list-style-type: none"> Press and hold  (Go) and  (CANCEL JOB) simultaneously to see a secondary light pattern. (See “Attention with Ability to Continue secondary messages” on page 177.) Press  (CANCEL JOB) to cancel the print job. If the problem has been resolved, the printer returns to the Ready state (Ready light on)
	<p>The Attention light, Ready light, and Go light are blinking. The printer stops printing, and pressing any button has no effect.</p>	<p>Accessory error. An error has occurred with either the EIO port or a DIMM slot.</p> <p>Press and hold  (Go) and  (CANCEL JOB) simultaneously to see a secondary light pattern. (See “Accessory error secondary messages” on page 179.)</p>

Table 23. Printer Status light messages (continued)

Message	Possible causes	Solutions
	<p>The Attention light, Ready light, and Go light are on. The printer stops printing, and pressing any button has no effect. Perform these steps.</p>	<p>Service error.</p> <ol style="list-style-type: none"> 1 If the printer is connected to a power strip or surge protector, disconnect it and connect the power cable directly to a working wall outlet. 2 Turn the printer off and then back on. If the problem persists, leave the printer off for 15 minutes to reset the printer. 3 If the problem continues, press and hold  (Go) and  (CANCEL JOB) simultaneously to see a secondary light pattern. (See "Service error secondary messages" on page 181.)

Attention with Ability to Continue secondary messages

If the printer has an Attention with Ability to Continue error (the Attention light is blinking and the Go light is on), press and hold  (Go) and  (CANCEL JOB) simultaneously to see the secondary error message.

You can also view the embedded Web server, which provides a text message that corresponds to the error and its secondary light pattern. For more information about how to use and view the embedded Web server, see page 41.

Table 24. Attention with Ability to Continue secondary messages

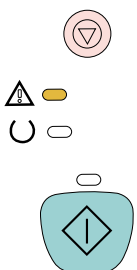

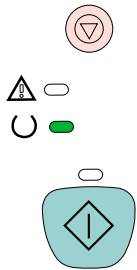

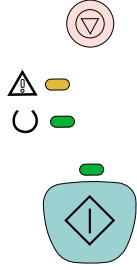

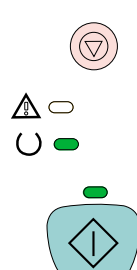

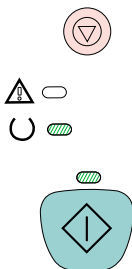

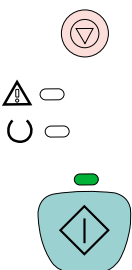

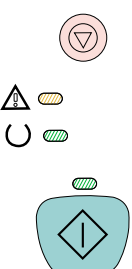

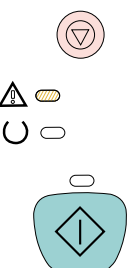

Message	Error and recommended action
	<p>20 Insufficient Memory error The Attention light is on. The printer memory is full.</p> <p>Press  (Go) to resume printing. If you lose some data, try to free some printer memory by removing any unnecessary fonts, macros, or any data currently in printer memory. If you continue to lose data, you might need to add more printer memory. For a temporary solution, simplify the image.</p>
	<p>41.3 Unexpected Size error or 41.x Printer error The Ready light is on.</p> <ol style="list-style-type: none"> 1 Load the correct size of media. If the correct size is loaded, press  (Go). 2 If printing does not resume, open the top cover, remove the imaging drum, and check for a jam inside the printer.
	<p>40 Bad Transmission error The Attention light, Ready light, and Go light are on.</p> <ol style="list-style-type: none"> 1 Press  (Go) to try to print a portion of the job. 2 If the printer is connected to the network, make sure that the cable is securely connected between the HP Jetdirect print server card and the network port. 3 If the printer is directly connected to a computer, the cable between the printer and computer has a bad connection or the cable is of poor quality. Disconnect the cable and reconnect it. Make sure that you are using a high-quality USB or IEEE-1284 compliant, size-B parallel cable. 4 If the error persists, replace the appropriate cable.
	<p>22 Buffer Overflow error The Ready light and Go light are on.</p> <ol style="list-style-type: none"> 1 Press  (Go) to try to print a portion of the job. 2 The connection between the printer and the computer might be loose. Turn the printer off and check the cable connection to make sure that it is secure. 3 The cable is malfunctioning. Try using a different, high-quality USB or IEEE-1284 compliant, size-B parallel cable. See chapter 7 for ordering information. 4 If the error persists, reduce the complexity of the print job, and try again to print.

Table 24. Attention with Ability to Continue secondary messages (continued)

	<p>Chosen Personality Not Available error</p> <p>The Ready light and Go light are blinking. The current job was canceled because the printer language (personality) is not supported.</p> <ol style="list-style-type: none"> 1 Press  (Go) to clear the message. 2 If you printed the job using one of the PCL drivers, try printing using the PS driver, or vice versa. 3 Turn off the printer and remove or replace the language font DIMM. Caution: You must turn off the printer before inserting or removing DIMMs.
	<p>Data Received error</p> <p>The Go light is on.</p> <p>The printer received data and is waiting for a form feed. Press  (Go) to print the last page. Sending another print job can also cause the page to print.</p>
	<p>General Attention with Ability to Continue error</p> <p>The Attention light, Ready light, and Go light are blinking.</p> <ol style="list-style-type: none"> 1 Press  (Go) to try to continue printing. 2 If the error persists, switch printer drivers and try again to print.
	<p>68.x Permanent Storage error</p> <p>The Attention light is blinking. The nonvolatile memory (NVRAM) is temporarily full.</p> <ol style="list-style-type: none"> 1 Press  (Go) to clear the message. Check the printer settings. 2 Remove the Jetdirect card, if it is installed, and then perform a cold reset (see page 209). 3 Perform a NVRAM init (see page 209).

Accessory error secondary messages

If the printer has an Accessory error (the Attention light, Ready light, and Go light are blinking), press and hold  (Go) and  (CANCEL JOB) simultaneously to see the secondary error message.

You can also view the embedded Web server, which provides a text message that corresponds to the error and its secondary light pattern. For more information about how to use and view the embedded Web server, see page 41.

Table 25. Accessory error secondary messages

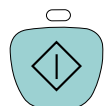

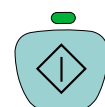

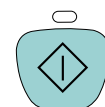

Message	Error and recommended action
   	<p>8x.yyyy EIO error The Attention light is blinking. A problem exists with the print server card.</p> <p>Caution: You must turn off the printer before inserting or removing the print server card to avoid damaging the print server card.</p> <ol style="list-style-type: none"> 1 Remove the print server card and reinstall it to make sure that it is correctly installed. 2 Make sure that you are using a supported print server card. See chapter 7 for ordering information. 3 To continue printing, remove the print server card from the EIO port and connect a parallel or USB cable. You must change the port or reinstall the software. 4 If the print server card still is not working, replace the print server.
   	<p>53.x1.zz Printer (DIMM Slot 1) error The Go light is on. A problem exists with the DIMM in DIMM slot 1.</p> <p>Caution: You must turn off the printer before inserting or removing DIMMs to avoid damaging them.</p> <ol style="list-style-type: none"> 1 Remove the DIMM and reinstall it to make sure that it is correctly installed. 2 Make sure that you are using a supported DIMM. See chapter 7 for ordering information. 3 Move the DIMM to a different DIMM slot. If the DIMM works in a different slot, then DIMM slot 1 is malfunctioning. <p>Note: Many of the first printers of this model were shipped with an 8 MB flash DIMM in DIMM slot 1. If the printer has an 8 MB flash DIMM in DIMM slot 1, then replace the DIMM. The 8 MB flash DIMM will not work in any DIMM slot other than DIMM slot 1.</p> <ol style="list-style-type: none"> 4 To continue printing, remove the DIMM from DIMM slot 1.
   	<p>53.x2.zz Printer (DIMM Slot 2) error The Ready light is on. A problem exists with the DIMM in DIMM slot 2.</p> <p>Caution: You must turn off the printer before inserting or removing DIMMs to avoid damaging them.</p> <ol style="list-style-type: none"> 1 Remove the DIMM and reinstall it to make sure that it is correctly installed. 2 Make sure that you are using a supported DIMM. See chapter 7 for ordering information. 3 Move the DIMM to a different DIMM slot. If the DIMM works in a different slot, then DIMM slot 2 is malfunctioning. 4 To continue printing, remove the DIMM from DIMM slot 2.

Table 25. Accessory error secondary messages

  	<p>53.x3.zz Printer (DIMM Slot 3) error</p> <p>The Attention light is on. A problem exists with the DIMM in DIMM slot 3.</p> <p>Caution: You must turn off the printer before inserting or removing DIMMs to avoid damaging them.</p> <ol style="list-style-type: none">1 Remove the DIMM and reinstall it to make sure that it is correctly installed.2 Make sure that you are using a supported DIMM. See chapter 7 for ordering information.3 Move the DIMM to a different DIMM slot. If the DIMM works in a different slot, then DIMM slot 3 is malfunctioning.4 To continue printing, remove the DIMM from DIMM slot 3.
---	---

Service error secondary messages

If the printer has a service error (Attention light, Ready light, and Go light are on), press and hold  (Go) and  (CANCEL JOB) simultaneously to see the secondary error message.

You can also view the embedded Web server, which provides a text message that corresponds to the error and its secondary light pattern. For more information about how to use and view the embedded Web server, see page 41.

Table 26. Service error secondary messages

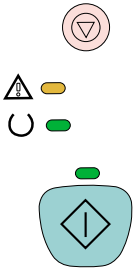

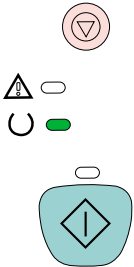

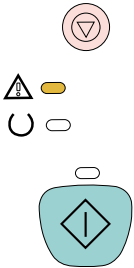

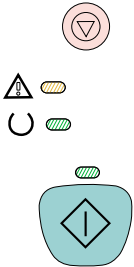

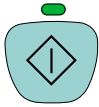

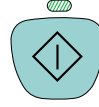

Message	Error and recommended action
	<p>51.x Bad beam detect error The Attention, Ready, and Go lights remain on.</p> <ol style="list-style-type: none"> 1 Press  (Go). The page that contains the error will automatically be reprinted. 2 Turn the printer off and then back on. 3 Replace the laser/scanner (see page 116).
	<p>52.x Scanner error The Ready light is on.</p> <ol style="list-style-type: none"> 1 Press  (Go). The page that contains the error will automatically be reprinted. 2 Turn the printer off and then back on. 3 Turn the printer off, and then reseal the laser/scanner cable. 4 Replace the laser/scanner (see page 116).
	<p>55.x Engine communication error The Attention light is on.</p> <ol style="list-style-type: none"> 1 Turn the printer off and then back on. 2 Check the connections to the formatter and the dc controller. 3 Replace the formatter (see page 101). 4 Replace the dc controller (see page 104). 5 Replace the laser/scanner (see page 116).
	<p>49.xxxxx Formatter/engine error The Go, Ready, and Attention lights are blinking, or the magenta-print-cartridge, yellow-print-cartridge, and imaging-drum lights are on.</p> <ol style="list-style-type: none"> 1 Turn the printer off and then back on. 2 Replace the formatter (see page 101).

Table 26. Service error secondary messages (continued)

  	<p>50.X Fuser error The Ready and Go lights are on.</p> <ol style="list-style-type: none"> 1 Turn the printer off for approximately 20 to 30 minutes, and then turn the printer back on. 2 If the error persists, replace the fuser (see page 92).
  	<p>57.x Fan motor error The Attention light is blinking.</p> <ol style="list-style-type: none"> 1 Turn the printer off and then back on. 2 Turn the printer off, and then reseal the cable that connects the fan and the formatter. 3 Replace the fan (see page 115). 4 Replace the dc controller.
  	<p>64 Scan buffer error The Go light is blinking.</p> <ol style="list-style-type: none"> 1 Turn the printer off and then back on. 2 Replace the formatter (see page 101).

Solving image-quality problems

If your document is printing but the quality is not what you expected, start by using the print-quality checklist.

Print-quality checklist

General print-quality problems can be solved by following the checklist below.

- 1 Check the printer driver to make sure that you are using the best available print-quality option, or return to the default settings. See the user guide for more information about print-quality options.
- 2 Make sure that the paper or print media you are using meets specifications. See the user guide for more information. Generally, smoother paper provides better results (although coated, photo, and glossy papers are not supported).
- 3 If you are using a special print media such as labels, transparencies, or letterhead, make sure that you selected the correct media type (see the **Paper** tab in the printer driver). See the user guide for information about HP print-media specifications.
- 4 Print a Configuration page and Supplies Status page at the printer by pressing  (Go) and  (CANCEL JOB) simultaneously. If the pages do not print, then the problem is in the hardware rather than in the software.
 - Check printer status messages on the Configuration page.
 - Check the Supplies Status page to see if any supplies are low or empty. Note that no information is provided for non-HP print cartridges. Replace non-HP print cartridges with HP print cartridges.
- 5 Print a Demo page from the HP Color LaserJet 2500 Series Toolbox. If the page prints, the problem might be in the printer driver. Try printing from one of the other printer drivers. For example, if you are using the PCL 6 printer driver, print from the PCL 5c or PS printer driver.
- 6 Try printing from a different program. If the page prints correctly, the problem might be in the program from which you were printing.
- 7 Restart the computer and the printer and try printing again. If the problem is not resolved, choose one of these options:
 - If the problem is affecting all printed pages, see “Solving image-quality problems (all print jobs)” on page 184.
 - If the problem is affecting only pages that are printed in color, see “Solving image-quality problems (color print jobs)” on page 191.

Solving image-quality problems (all print jobs)

The examples below depict letter-size paper that has passed through the printer short-edge first. These examples illustrate problems that would affect all pages you print, whether you print in color or in black only. The topics that follow list the typical cause and solution for each of these examples.

Light print or fade

Toner specks

Dropouts

Vertical lines

Gray background

Toner smear

Loose toner

Repetitive defects on the front

Repetitive defects on the back

Misformed characters

Curl or wave

Page skew

Wrinkles or creases

Toner scatter outline

Random image repetition (light)

Random image repetition (dark)

Light print or fade

A vertical streak or an incorrect or faded color area appears on the page.

- The paper might not meet HP's paper specifications (for example, the paper is too moist or too rough). See the user guide for information about print-media specifications.
- One or more print cartridges are low. If you are using non-HP print cartridges, no messages appear on the printer control panel or in the embedded Web server.
- The imaging drum might be low or empty. Print the Supplies Status page to check remaining life. Replace the imaging drum if it is low or empty.
- If none of the print cartridges or the imaging drum is low or empty, remove the print cartridges one at a time and inspect the toner roller in each to see if the roller is damaged. If so, replace the print cartridge.
- Inspect the imaging drum for toner dust, oil, or fingerprints.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Toner specks

- The paper might not meet specifications. For example, the paper is too moist or too rough. See the user guide for information about print-media specifications.
- The paper path might need to be cleaned. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See "To use a cleaning page" on page 53 for details.
- If using a cleaning page did not solve the problem, then check the fuser for contamination and replace the fuser, if necessary.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Dropouts

Faded areas, generally rounded, occur randomly on the page.

- A single sheet of paper might be defective. Try reprinting the job.
- The paper path might need to be cleaned. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See "To use a cleaning page" on page 53 for details.
- The moisture content of the paper is uneven or the paper has moist spots on its surface. Try different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- The paper lot is flawed. The manufacturing processes can cause some areas to reject toner. Try a different brand of paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- The imaging drum might be defective. See "Repetitive defects on the front" on page 187.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Vertical lines

Vertical streaks or bands appear on the page.

- One or more print cartridges are low or defective. Print the Supplies Status page to check remaining life. If you are using non-HP print cartridges, no messages appear on the printer control panel or in the embedded Web server.
- Clean the printer using a cleaning page. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See “To use a cleaning page” on page 53 for details.
- Use the tools on the **Troubleshooting** tab of the HP Color LaserJet Toolbox to correct the problem.
- Inspect the imaging drum for toner dust, oil, or fingerprints.
- Check the jam-access door.
- If the problem is not resolved, see “If the problem is not resolved” on page 190.

Gray background

The amount of background toner shading is unacceptable.

- Clean the density sensor and perform a calibration. See “Cleaning the engine” on page 53.
- Use a different paper with a lighter basis weight. See the user guide for information about print-media specifications.
- Check the printer environment. Very dry (low humidity) conditions can increase the amount of background shading.
- One or more print cartridges are low. If you are using non-HP print cartridges, no messages appear on the printer control panel or in the embedded Web server.
- The imaging drum might be low or empty. Print the Supplies Status page to check remaining life. Replace the imaging drum if it is low or empty.
- If the problem is not resolved, see “If the problem is not resolved” on page 190.

Toner smear

Toner smears appear on the leading edge of the paper.

- Check the paper type and quality. Use a different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- If toner smears appear on the leading edge of the paper, the paper guides are dirty, or debris is in the print path. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See “To use a cleaning page” on page 53 for details.
- The imaging drum might be low or empty. Check the status of the imaging drum at the printer control panel or in the embedded Web server and replace the imaging drum if it is low or empty.
- The fuser might not be heating correctly. If the printer is plugged into a surge protector, plug it directly into the wall.
- If the problem is not resolved, see “If the problem is not resolved” on page 190.

Loose toner

Toner smears easily when touched.

- In the printer driver, select the **Paper** tab and set **Type is** to match the type of paper on which you are printing. Print speed might be slower if you are using heavy paper. For UNIX, Linux, and OS/2, this feature is available in the embedded Web server if the printer is connected to a network.
- Check the paper type and quality. Use a different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- Clean the inside of the printer. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See "To use a cleaning page" on page 53 for details.
- The fuser or imaging drum might be damaged.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Repetitive defects on the front

Marks repeatedly appear on the printed side of the page at even intervals.

- In the printer driver, select the **Paper** tab and set **Type is** to match the type of paper on which you are printing. Print speed might be slower if you are using heavy paper. For UNIX, Linux, and OS/2, this feature is available in the embedded Web server if the printer is connected to a network.
- Clean the printer. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See "To use a cleaning page" on page 53 for details.
- Use the tools on the **Troubleshooting** tab of the HP Color LaserJet Toolbox to correct the problem.
- The imaging drum might be defective. Replace the imaging drum.
- The fuser or imaging drum might be damaged.
- One of the print cartridges might be defective. Examine the print cartridges and replace as needed.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Repetitive defects on the back

Marks repeatedly appear on the unprinted side of the page at even intervals.

- Internal parts might have toner on them. The problem will likely correct itself after a few more pages.
- Clean the printer. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See "To use a cleaning page" on page 53 for details.
- The fuser or imaging drum might be damaged.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Misformed characters

- If characters are improperly formed so that they produce hollow images, the paper might be too slick (for example, photo, glossy, or coated paper). Use a different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- If characters are improperly formed so that they produce a wavy effect, the laser/scanner might need service. Verify that the problem also occurs on the Configuration page. If so, replace the laser/scanner.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Curl or wave

- Turn over the stack of paper in the tray. Also try rotating the paper 180 degrees in the input tray.
- Set the correct Type in the printer driver. Heavier paper might take longer to print.
- Open the rear output door to print to the straight-through paper path.
- Check the paper type and quality. Both high temperature and humidity will cause paper curl. Use a different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Page skew

- Make sure that the paper or other print media is loaded correctly and that the guides are not too tight or too loose against the stack. See "Loading media" on page 38.
- Check the paper type and quality. Use a different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Wrinkles or creases

- Make sure that paper is loaded properly.
- Turn over the stack of paper in the input tray, or try rotating the paper 180 degrees in the input tray.
- Open the rear output door to print to the straight-through paper path.
- Check the paper type and quality. Use a different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- Reseat the fuser.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Toner scatter outline

- Turn over the stack of paper in the tray.
- Clean the density sensor and perform a calibration. See "Cleaning the engine" on page 53.
- Small amounts of toner scatter are normal for laser printing.
- If large amounts of toner have scattered around the characters, the paper might have high resistivity. Use a different paper, such as high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- Change the print mode in the embedded Web server to dry-media mode.
- If the problem is not resolved, see "If the problem is not resolved" on page 190.

Random image repetition

If an image that appears at the top of the page (in solid black) repeats farther down the page (in a gray field), the toner might not have been completely erased from the last print job. The repeated image might be lighter or darker than the field in which it appears.

- Clean the printer. Open the HP Color LaserJet 2500 Series Toolbox to use the cleaning page. See “To use a cleaning page” on page 53 for details.
- In your program, change the tone (darkness) of the field in which the repeated image appears.
- In your program, rotate the whole page 180 degrees to print the lighter image first.
- Change the order in which the images are printed. For example, have the lighter image at the top of the page, and the darker image farther down the page.
- If the defect occurs later in a print job, turn the printer off for 10 minutes, and then turn the printer on to restart the print job.
- Replace the imaging drum.
- Replace the fuser.
- If the problem is not resolved, see “If the problem is not resolved” on page 190.

If the problem is not resolved

If the problem is not resolved, try these steps:

- 1 Perform a cleaning and calibration. See “Calibrating the printer” on page 54.
- 2 Print the Configuration page and Supplies Status page again.
 - If the pages print correctly, then the problem is in the program, the computer, or the printer driver.
 - If the pages do not print correctly, then the problem is in the printer hardware. The problem might be the fuser or the imaging drum.
- 3 Change the Type setting in the printer driver, or change the print mode in the embedded Web server. If this step does not help, proceed to the next step.
- 4 If the problem persists, check the paper type and quality. (See the user guide for information about print-media specifications.) Use a different paper, such as high-quality paper intended for laser printers. Coated, photo, and glossy papers are not supported.
- 5 Print to a different printer.
 - If the page prints correctly, then the problem might be in the printer driver for the HP Color LaserJet 2500 printer. Uninstall the printer driver and reinstall it.
 - If the page does not print correctly, the problem is in the program or the computer. See the documentation for the program or the computer.

Solving image-quality problems (color print jobs)

This section describes issues that can occur when you print in color.

Important step

Whenever you are experiencing color-related issues, calibrate the printer before trying any other steps. See “Calibrating the printer” on page 54.

Print-quality troubleshooting page

The print-quality troubleshooting page is available through the HP Color LaserJet 2500 Series Toolbox. The print-quality troubleshooting page is also available directly from the software CD-ROM for instances in which the printer is not connected to a Windows environment or the HP Color LaserJet 2500 Series Toolbox is otherwise unavailable.

- See page 222 for information about how to view the HP Color LaserJet 2500 Series Toolbox. The print-quality troubleshooting page is located on the Documentation tab.

After the page prints, follow the instructions for reading the page and correcting print-quality problems.

- To print the print-quality troubleshooting page from the software CD-ROM, copy the file `pq_diag.prn`, which is located in the `\prnfiles` directory, to the printer. For example, the following command prints the print-quality troubleshooting page from MS-DOS®:

```
copy d:\prnfiles\pq_diag.prn lpt1
```

Three pages should print. The first page is the print-quality troubleshooting page, which is comprised of horizontal stripes in four colors plus grey. The second and third pages contain instructions for reading the print-quality troubleshooting page and correcting print-quality problems.

Only black prints

Missing or incorrect color

Color prints inconsistently

Colors do not match

Color pages have inconsistent finish

Only black prints

Only black is printing when the document should be printing in color.

- Color mode is not selected in your program or printer driver. Select color mode instead of grayscale mode.
- If you are printing on transparencies, all transparencies print in grayscale.
- The correct printer driver is not selected in the program. Select the correct printer driver.
- The printer is not properly configured. Check the printer configuration by printing a Configuration page. If no color appears on the Configuration page, replace the imaging drum.

Missing or incorrect color

- You have changed the color settings manually. Return the color setting to Automatic.
 - Windows: On the **Color** tab of the printer driver, click **Automatic**.
 - Mac OS: In the **Print** dialog box, select the **HP ColorSmart** or **HP Color Quality** pop-up menu and then select the **Manual** option.
- Your print media does not meet the specifications for this printer. For example, you are using coated, glossy, or photo paper. Use a different paper, such as a high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- You are operating the printer in excessively humid or dry conditions. Verify that the printer environment is within humidity specifications.
- A print cartridge might be low on toner. Check the printer control panel, print a Supplies Status page, or view the embedded Web server to see supplies status. (If you are using a non-HP cartridge, none of these sources will provide information about a low or empty print cartridge.) If a cartridge is low on toner, replace the print cartridge.
- Clean the sensors and perform a calibration. See "Cleaning the engine" on page 53.

Color prints inconsistently

A color is printing inconsistently after you load a new print cartridge.

- Another print cartridge might be low on toner. Check the supplies status lights or embedded Web server to see if a print cartridge is low and replace it if necessary. If you are using a non-HP print cartridge, it might be low or empty but you will receive no indication.
- Print cartridges might be improperly installed. Remove the print cartridge for the color that is printing inconsistently and reinstall it.
- Your print media does not meet the specifications for this printer. For example, you are using coated, glossy, or photo paper. Use a different paper, such as a high-quality paper intended for laser printers. See the user guide for information about print-media specifications.

Colors do not match

The colors on the printed page do not match the colors as they appear on the screen.

- Your print media does not meet the specifications for this printer. For example, you are using coated, glossy, or photo paper. Use a different paper, such as a high-quality paper intended for laser printers. See the user guide for information about print-media specifications.
- The colors on your computer monitor differ from the printer output. Try selecting Screen Match on the **Color** tab of the printer driver.
- Print the Configuration and Supplies Status pages to make sure that they print correctly. If not, the problem is with the printer.
- Try printing from a different program or from one of the other printer drivers. For example, if you are using the PCL 6 printer driver, try the PCL 5c or PS printer driver.
- Extremely light colors or extremely dark colors on screen are not printing. Your program might interpret extremely light colors as white or extremely dark colors as black. If so, avoid using extremely light or extremely dark colors.
- Clean the sensors and perform a calibration. See "Calibrating the printer" on page 54.

Color pages have inconsistent finish

- Use a smooth paper or print media, such as a high-quality paper made for laser printers. Generally, the smoother the paper, the better the results, although coated, photo, and glossy papers are not supported. See the user guide for information about print-media specifications.

Resolving problems that generated messages

This section helps resolve problems that generated messages on the computer.

Messages for both Windows and Macintosh

This section lists some common errors that only provide a simple message but no information for resolving the error. Errors that you see in Printer Status and Alerts, the HP Color LaserJet 2500 Series Toolbox, or the embedded Web server provide their own instructions for resolving the error. For other errors generated by your operating system, see the documentation for the operating system or computer.

Symptom	Possible Cause	Solution
Limit Check Error	The print job is too complex.	<ul style="list-style-type: none">● Reduce the complexity of the page. For example, try using fewer fonts.
PostScript error	The printer is out of memory.	<ul style="list-style-type: none">● Use one of the other printer drivers.● Send the print job in smaller pieces or with a fewer number of pages.● Install more memory.

Messages for Windows only

Message	Solution
"Error Writing to.400x" in Windows 95, 98, or Me	<ul style="list-style-type: none">● Make sure that there is paper in the tray.● Make sure the cables are connected correctly, the printer is on, and the Ready light is on.● Make sure that the printer is not connected using both a USB and a parallel cable. If it is, disconnect both cables and reinstall one cable.● Print a Configuration page from the HP Color LaserJet 2500 Series Toolbox to make sure that the computer can communicate with the printer.● On the Start menu, point to Settings and click Printers. Right-click the HP Color LaserJet 2500 printer driver and select Properties. Click Details and then click Port Settings. Clear the Check Port State before Printing check box and click OK. Click Spool Settings, select Print Directly to Printer, and click OK.● Try again to print.
"General Protection Fault" "Exception OE" "Spool32" "Illegal Operation"	<ul style="list-style-type: none">● Restart the computer and try again.● Clear the contents of the computer Temp folder, which is generally located in C:\Windows (95, 98, and Me) or C:\Winnt (NT 4.0, 2000, and XP).
Other Windows messages	See Microsoft Windows 95, 98, 2000, NT 4.0, Me, or XP documentation that came with the operating system or computer for information.

Resolving problems that did not generate messages

Troubleshooting checklist

If the printer is not responding correctly, complete the steps in the following checklist, in order. If the printer does not pass a step, follow the corresponding troubleshooting suggestions. If a step resolves the problem, you can stop without performing the remaining steps on the checklist.

- 1 Make sure the printer Ready light is on. If no lights are on, complete the following steps:
 - a Check the power cable connections.
 - b Make sure that the power switch is on.
 - c Check the power source by plugging the printer directly into the wall or into a different outlet.
 - d If none of these measures restores power, replace the high-voltage power supply.
 - e If replacing the high-voltage power supply does not restore power, replace the dc controller.
- 2 Check the cabling.
 - a Check the cable connection between the printer and the computer or network port. Make sure that the connection is secure.
 - b Make sure that the cable itself is not faulty by using a different cable, if possible.
 - c Make sure that you do not have both a USB and a parallel cable installed. If you do, the USB automatically disables itself. Disconnect both cables and then reinstall the one you want to use.
 - d Check the network connection. See “Checking the network” on page 196.
- 3 Press  (Go) and  (CANCEL JOB) simultaneously to print a Configuration page and a Supplies Status page. An HP Jetdirect page also prints, if a print server card is installed.
- If the Configuration and Supplies Status pages do not print, check the following items:
 - a Check that there is paper in at least one of the printer input trays.
 - b If the page jams in the printer, see “Clearing jams” on page 164.
 - c Make sure that the print media you are using meets specifications. See the user guide for information about print-media specifications.
 - d Try again to print the Configuration and Supplies Status pages.
- If the Configuration and Supplies Status pages print, check the following items:
 - a If the pages print correctly, then the printer hardware is working. The problem is in the computer you are using, the printer driver, or the program.
 - b If the pages do not print correctly, calibrate the printer. See “Calibrating the printer” on page 54.
 - c Make sure that the print media you are using meets specifications. See the user guide for information about print-media specifications.
 - d Print the pages again. If the pages still do not print correctly, the problem is in the printer hardware.
- 4 At the computer, check the print queue or print spooler (Print Monitor or Print Center Queue for Mac OSs) to see if the printer is paused or set to print offline. Clear the print spooler and bring the printer online as needed.

- 5 Verify that you have installed the HP Color LaserJet 2500 series printer driver. Check the program to make sure that you are using an HP Color LaserJet 2500 series printer driver.
- 6 Use the printer-driver properties to check the assigned port.
- 7 Print a page from the HP Color LaserJet 2500 Series Toolbox (Windows 98 and later only).
 - a If the page prints, then the problem is with the printer driver. Try using one of the other printer drivers. Or, uninstall the printer driver (see the user guide) and reinstall it (see the getting started guide).
 - b If the page does not print, then the problem is with the computer or the program.
- 8 Print a short document by using a different program that has worked in the past. If this solution works, then the problem is with the program you are using. If this solution does not work (the document does not print) complete these steps:
 - a Try printing the job from another computer that has the printer software installed.
 - b If you connected the printer to the network, connect the printer directly to a computer by using a parallel or USB cable. Redirect the printer to the proper port, or reinstall the software and select the new connection type you are using.
- 9 If the problem is still not resolved, see "Solving general printing problems" on page 197.

Checking the network

It is recommended that you use the HP Color LaserJet 2500 printer CD-ROM to install and set up the printer on a network. Follow these steps to see if the problem is caused by the network.

- When the Configuration page printed, an HP Jetdirect configuration page should have printed if an HP Jetdirect print server card is installed. (If these pages do not print in your language, see "Troubleshooting tools" on page 210.) Verify that all network settings are properly configured.
- See the HP Jetdirect Print Server Administrator's Guide, which can be installed from the **View Documentation** or **User Documentation** sections on the HP Color LaserJet 2500 printer CD-ROM.
- Contact the network administrator for assistance.

Solving general printing problems

In addition to the problems listed in this section, see “Solving common Macintosh problems” on page 202 if you are using a Macintosh computer, and see “Solving PostScript (PS) errors” on page 201 if you are using several printer languages.

Table 27. Solving general printing problems

Symptom	Possible Cause	Solution
The print job is extremely slow.	The job might be very complex (for example, if it contains graphics).	<ul style="list-style-type: none"> Wait for the job to print. Reduce the complexity of the page or try adjusting the print-quality settings. If this problem occurs frequently, add memory to the printer.
	The maximum speed is 16 ppm in black and 4 ppm in color and cannot be exceeded even when more memory is added.	Wait for the print job to finish.
	Printing speeds might be automatically reduced when printing special-sized media.	Wait for the print job to finish.
	In the printer driver, the Type or Size is set incorrectly for the media in the printer.	<ul style="list-style-type: none"> If you are printing on heavy paper, the Type or Size should be set to a heavy paper setting. The printer prints more slowly to provide better quality. Wait for the job to print. If you are not printing on heavy paper, set Type or Size in the printer driver to plain paper. In the default settings for this printer, click the Paper tab and make sure that Type is set to plain paper. You can override this setting from the printer driver when you print on heavy paper.
	An issue might exist with the driver.	<ul style="list-style-type: none"> If you are printing using a PCL driver, print using the PS driver, or vice versa.
The printer pulls paper or print media from the wrong tray.	The Source (tray) selection might be incorrect.	<ul style="list-style-type: none"> For Windows, make sure that the Source is selected from the Print dialog box (which is part of the program) if possible or in the printer driver. If you select the Source in the printer driver and then select a different Source in the Print dialog box, the Source setting in the printer driver changes to match the Source setting in the Print dialog box. For Macintosh, set the Source in the Print dialog box. Remove any media from other trays to make the printer select from the tray you want, and then press  (Go).
	The Type or Size setting does not match the size of paper or print media loaded in the tray.	Using the embedded Web server, change the Type or Size setting for the tray to match the size of print media that is loaded.
	Media is loaded in tray 1.	Remove any media from tray 1. The printer pulls from tray 1 if you did not specify a tray that had a compatible size or type loaded and tray 1 is unconfigured.

Table 27. Solving general printing problems

Symptom	Possible Cause	Solution
Printer does not pull paper from optional tray 2 or optional tray 3.	The rear paper length guide (optional tray 2) or the rear paper stop (optional tray 3) is set incorrectly.	To set the rear guides properly, see “Loading optional tray 2” on page 39 or “Loading optional tray 3” on page 40.
	The tray is not recognized in the printer software.	Configure the printer software to recognize the tray.
	If the printer does not pull paper from either tray, the problem might be the paper.	<ul style="list-style-type: none"> Try a different type or brand of paper. Make sure that you are using a high-quality paper made for laser printers. Coated, photo, and glossy papers are not supported. See the user guide for information about print-media specifications or to order media.
	The separation pad and the pick-up rollers might be worn out.	Replace the separation pad and pick-up rollers. See table “Life expectancies of consumables” on page 46 for ordering information.
The printer does not recognize a DIMM that is installed.	The DIMM is not recognized in the printer software.	Configure the printer software to recognize the DIMM. See the user guide for information.
The printer does not respond when the Print command is selected in the software.	The printer experienced an error.	Check the control panel lights on the printer to determine if an error exists.
	If no control panel lights are on, the printer is not receiving power.	<ol style="list-style-type: none"> 1. Check the power cable connection between the printer and the power source. 2. Check that the power switch is on. 3. Check that the power source (outlet or surge protector) is receiving power. 4. If the problem persists, replace the high-voltage power supply. 5. If, after replacing the high-voltage power supply, the problem persists, replace the dc controller.
	The printer might be in Manual Feed mode (the Attention light is blinking and Go is light on).	Add media to tray 1 if it is empty. If paper is already in the tray, press  (Go).
	The wrong printer was selected in the software.	<ul style="list-style-type: none"> In the Print or Printer Setup dialog box, make sure that the HP Color LaserJet 2500 printer is selected as the printer.
	A jam might be present.	Clear any jams. See “Clearing jams” on page 164.
	The printer is on a network and is not receiving a signal.	<ul style="list-style-type: none"> Disconnect the printer from the network and attach it directly to a computer using a parallel or USB cable. Clear any stopped jobs from the print queue. Print a job that you know works. Reinstall the printing software.
	The interface cable between the computer (or network) and the printer is not connected properly.	Disconnect and reconnect the interface cable.
	The interface cable is defective.	<ul style="list-style-type: none"> If possible, connect the interface cable to another computer (or network port) and print a job that you know works. Try using a different cable.
	If the printer is connected to a computer, the software for the printer is not configured for the printer port.	<ul style="list-style-type: none"> Check the printer selection menu in the software to make sure it is using the correct port. If the computer has more than one port, make sure that the printer is associated with the correct one. Remove all shared or third-party devices.

Table 27. Solving general printing problems

Symptom	Possible Cause	Solution
Pages print, but all colors do not print or the pages are completely blank.	One of the print cartridges might be low or empty.	Run an engine test (see page 205) and see if all four colors print. If not all colors print, replace one or more of the print cartridges. If the engine test is successful, replace the formatter.
	If the printed pages are completely blank, the file might have blank pages.	Check the file to make sure that it does not contain blank pages.
	A print cartridge might be low or empty.	Check the printer control panel for a Supplies Status message, print a Supplies Status page, or use the embedded Web server to see the levels remaining in the print cartridges. Replace any print cartridges that are low or empty. Messages are not created for non-HP print cartridges.
	If you are using non-HP print cartridges, one or more print cartridges are low or empty. The control panel lights do not indicate low or empty for non-HP print cartridges.	Replace one or more of the print cartridges.
	Font DIMM might be selected but the font DIMM is not physically installed in the printer. (This issue only applies to printers using an Asian-language font DIMM.)	In the settings for this printer, clear the Font DIMM check box on the Configure tab if no font DIMM is installed in the printer. Select the Font DIMM check box only if the font DIMM is physically installed in the printer. If you think that the font DIMM is installed, make sure that it is installed correctly.
The paper curls when exiting the top output bin.	The paper needs to print to the straight-through paper path.	Open the rear output door to print to the straight-through paper path. Remove each sheet as it exits the printer.
	The stack was slightly curled when it was placed in the tray.	Turn the stack over in the tray.
	The paper does not meet specifications.	See the user guide for information about print-media specifications.
	If you are printing on light media, the Type setting might not be correct.	Select Light in the Type is field in the printer driver.

Table 27. Solving general printing problems

Symptom	Possible Cause	Solution
The printer prints, but the text is wrong, garbled, or incomplete.	The interface cable is loose or defective.	Disconnect the printer cable and reconnect it. Try a print job that you know works. If possible, attach the cable and printer to another computer and try a print job that you know works. Finally, try a new cable.
	The printer is on a network or sharing device and is not receiving a clear signal.	Disconnect the printer from the network or shared drivers and attach it directly to a computer with a parallel or USB cable. Print a job that you know works.
	The wrong driver was selected in the software.	In the Print or Printer Setup dialog box, make sure that the HP Color LaserJet 2500 printer is selected as the printer and that the appropriate port is selected.
	The printer driver is malfunctioning.	Print a page from the HP Color LaserJet 2500 Series Toolbox. If the page prints, then the problem is in the printer driver. Uninstall and reinstall the printer driver.
	The program is malfunctioning.	Try printing a job from another program.
	If the printer is connected to a computer, the operating system is malfunctioning.	<p>Check the operating system. If you do not know how to use the method below, see the documentation that came with the computer.</p> <p>Note: This method works with Windows 98, NT 4.0, and 2000 (and computers with these operating systems must be connected to a parallel cable).</p> <p>Restart the computer. When it beeps during startup, press F5 and select Command Prompt Only. At the C:\ prompt on the computer, type <code>Dir>LPT1</code> and then press ENTER. (This assumes that the printer is connected to LPT1.) If the Go light comes on at the printer, press  (Go) to print and eject the page. If the page prints correctly, then the operating system is malfunctioning.</p>
	Font DIMM might be selected but the font DIMM might not be physically installed in the printer. (This issue only applies to printers with an Asian-language font DIMM installed.)	In the settings for this printer, clear the Font DIMM check box on the Configure tab if no font DIMM is installed in the printer. Select the Font DIMM check box only if the font DIMM is physically installed in the printer. If you think that the font DIMM is installed, make sure that it is installed correctly.

Solving PostScript (PS) errors

The following situations are specific to the PS language and might occur when several printer languages are being used.

Note

To receive a printed or an onscreen message when PS errors occur, select this option in the PS printer driver or the embedded Web server.

Symptom	Possible Cause	Solution
The job prints in Courier (the printer default typeface) instead of the typeface you requested.	The requested typeface is not downloaded. A personality switch might have been performed to print a PCL job just before the PS printing job was received.	Download the font you want to use and send the print job again. Verify the type and location of the font. Download the font to printer, if applicable. See the software documentation.
A PS error page prints.	The print job might not be a PS job.	Make sure the print job is a PS job. Check to see whether the program expected a setup or PS header file to be sent to the printer.
VM Error	This is a PS font error that occurs when you are using several fonts.	<ul style="list-style-type: none">● Select Unlimited Downloadable Fonts in the printer driver.
Range Check	The tray settings are incorrect.	<ul style="list-style-type: none">● Try printing from a different tray.● Select Unlimited Downloadable Fonts in the printer driver.
Limit Check	The printer is out of memory.	<ul style="list-style-type: none">● Reduce the complexity of the page.● Use one of the other printer drivers.● Send the print job in smaller pieces with a fewer number of pages.● Install more memory.

Solving common Macintosh problems

In addition to the problems listed in “Solving general printing problems” on page 197, this section lists problems that can happen only when using the Mac OS, versions 9.1 to OS X.

Symptom	Possible Cause	Solution
Problems in the Chooser		
The printer driver icon does not appear in the Chooser (when using Mac OS, version OS X).	The software was not installed correctly.	The LaserWriter driver should be present as a part of the Mac OS. Make sure that the LaserWriter driver is in the Extensions folder within the systems folder. If not, install the LaserWriter driver from your Mac OS CD-ROM.
	The interface cable might not be of high quality.	Make sure that you are using a high-quality interface cable.
	An incorrect network might be selected.	Make sure that the printer is on the correct network. Select the Network or AppleTalk Control Panel from Control Panels in the Apple menu and then select the correct network.
The printer name does not appear in the Select a PostScript Printer box in the Chooser.	The printer might not be ready.	Make sure that the cables are connected correctly, the printer is on, and the Ready light is on.
	The correct printer driver might not be selected.	Make sure that the correct printer driver has been selected in the Chooser (for example, LaserWriter).
	An incorrect zone might be selected.	If the printer resides on a network that has multiple zones, make sure that the correct zone is selected in the AppleTalk Zones box in the Chooser.
	The PS driver might not be installed.	Verify that the PS driver is installed.
	The printer might not be selected in the Chooser.	Print a Configuration page to make sure that the printer has been selected in the Chooser. [Simultaneously press  (Go) and  (CANCEL JOB) on the printer.] Check the AppleTalk name of the printer that appears on the Configuration page.
	AppleTalk might be off.	Make sure that AppleTalk is on. (The button next to Active is selected in the Chooser.) You might need to restart the computer to activate the change.
The printer driver does not automatically set up the selected printer even though you clicked Auto Setup in the Chooser.		Reinstall the printer software. See the getting started guide.
Printing Errors		
A print job was not sent to the printer that you wanted.	Another printer with the same or similar name might have received your print job.	<ul style="list-style-type: none"> Check the AppleTalk name of the printer that appears on the Configuration page. Make sure that the cables are connected correctly, the printer is on, and the Ready light is on.
You cannot use the computer while the printer is printing.	Background Printing has not been selected.	For LaserWriter 8.6 and later: Turn Background Printing on by selecting Print Desktop on the File menu and then clicking Background Printing .

Symptom	Possible Cause	Solution
An encapsulated PostScript (EPS) file does not print with the correct fonts.	This problem occurs with some programs.	<ul style="list-style-type: none"> Try downloading the fonts contained in the EPS file to the printer before printing. Send the file in ASCII format instead of a binary encoding.
Your document is not printing with New York, Geneva, or Monaco fonts.	The printer might be substituting fonts.	Select Options in the Page Setup dialog box to clear the substituted fonts.
USB Problems		
You are unable to print from a third-party USB card.	This error occurs when the software for USB printers is not installed.	When adding a third-party USB card, you might need the Apple USB Adapter Card Support software. The most current version of this software is available from the Apple website.
When connected using a USB cable, the printer does not appear in the Macintosh Chooser after the driver is selected.	This problem is caused by either a software or hardware component.	<p>Software troubleshooting</p> <ul style="list-style-type: none"> Make sure that your Macintosh supports USB. Verify that your Macintosh has Mac OS 8.6 or later. Make sure that your Macintosh has the appropriate USB software from Apple. <p>Note: The iMac and Blue G3 desktop Macintosh systems meet all of the requirements to connect to a USB device.</p> <p>Hardware troubleshooting</p> <ul style="list-style-type: none"> Make sure that the printer is turned on. Make sure that the USB cable is properly connected. Make sure that you are using the appropriate high-speed USB cable. Make sure that not too many USB devices are drawing power from the chain. Disconnect all devices from the chain and connect the cable directly to the USB port on the host computer. Check to see if more than two nonpowered USB hubs are connected in a row on the chain. Disconnect all devices from the chain and connect the cable directly to the USB port on the host computer. <p>Note: The iMac keyboard is a nonpowered USB hub.</p>

Rotating the print-cartridge carousel

Under normal conditions, pressing  (ROTATE CAROUSEL) brings another print cartridge to the top position. However, if the carousel does not rotate, do the following:

- 1 Open the top cover.
- 2 Use a small flatblade screwdriver to lift up the carousel brake (callout 1).

Note

In figure 108, the top cover is removed.

- 3 Rotate the carousel manually.

Figure 108.

Rotating the print-cartridge carousel

Functional checks

Engine test

The engine test is used to verify that the print engine is functioning correctly. The formatter is bypassed during an engine test, so the engine test is useful for isolating printer problems. Because the engine test prints horizontal lines along the entire printable area of a page, it is also useful for checking and adjusting registration.

Printing an engine test

The engine test switch is inside tray 1, on the left side, just below the front cover.

To print an engine test, open tray 1, and then press the engine-test switch.

Note

The formatter must be connected to the ECU to perform an engine test. Otherwise, the printer does not print the engine test.

Figure 109. Location of the engine-test switch

Half self-test functional check

The electrophotographic process can be subdivided into the following stages:

- image-formation stage (charges the drum and writes a latent image to the drum with the laser)
- development stage (forms a toner image on the drum)
- transfer stage (transfers the image to media)
- cleaning stage (removes excess toner from the drum)
- fusing stage (applies heat and pressure to make the image permanent on the media)

To perform a half self-test check

The purpose of the half self-test check is to determine which process is malfunctioning.

- 1 Print a Configuration page. (See “Configuration page” on page 210.)
- 2 Open the top cover after the paper advances halfway through the printer (about five seconds after the motor begins rotation). The leading edge of the paper should have advanced past the imaging drum.

To perform other checks

If no image appears on the imaging drum, perform these checks:

- 1 Make sure that you removed the entire length of the sealing tape from the print cartridges before you installed the cartridges.
- 2 Perform a drum-rotation functional check (see page 206).
- 3 Perform a high-voltage power supply check (see page 207).

Drum-rotation functional check

The imaging drum must rotate for the print process to work. The photosensitive drum receives its drive from the main drive assembly.

Note

This test is especially important if refilled print cartridges have been used.

- 1 Open the printer door.
- 2 Remove the print cartridges.
- 3 Mark the drive gear on the cartridge with a felt-tipped marker. Note the position of the mark.
- 4 Install the print cartridge and close the printer door. The start-up sequence should rotate the drum enough to move the mark.
- 5 Open the printer and inspect the gear that was marked in step 3. Verify that the mark moved.

If the mark did not move, inspect the main drive assembly to make sure that it is meshing with the print cartridge gears. If the drive gears appear functional and the drum does not move, replace the print cartridge.

Heating element check

Media passes between the heating element and a soft pressure roller to fuse the toner to the media.

- 1 Unplug the printer for at least ten minutes.
- 2 Verify that the thermistor connector is seated into both the printer chassis and the low-voltage power supply.
- 3 Remove the heating element connector (callout 1) from the low-voltage power supply. To measure the continuity of the heating element, measure the resistance between the two pins at the end of the cable.

Note

Normal resistance is 25 ohms +/- 10 ohms for the 110 V printer and 80 ohms +/- 20 ohms for the 220 V printer.

- 4 If no resistance is measured, replace the fuser (see page 92).
- 5 Remove the thermistor connector (callout 2), and measure the resistance between J206 pins one and two and between J206 pins three and four.

Note

Normal resistance between both pairs of pins is 370K ohms +/- 50K ohms at 20° C (68° F).

- 6 If no resistance is measured, replace the fuser.

High-voltage power-supply check

The high-voltage power-supply PCA provides the necessary voltages for the electrophotographic processes.

To check the print cartridge connection points

Turn the print cartridge over and visually inspect the two connection points on the ends of the print cartridge. If they are dirty or corroded, clean the connections. If they are damaged, replace the print cartridge.

Note

Use only isopropyl alcohol to clean the connections.

Figure 110.

Print cartridge high-voltage connection points

Paper-path check

If media is not being picked up or is not moving through the paper path, you might want to observe all of the paper-motion activities. Override the door interlock (SW301) to observe:

- motor rotation
- solenoid action
- pickup-roller motion
- drive-roller, transfer-roller, fuser-roller and gear, and delivery-roller motion

To override SW301

Push a piece of heavy paper into the slot in the top cover (callout 1) to engage SW301.

Figure 111.

Overriding SW301

Service mode functions

Cold reset

A cold reset sets most, but not all, default variables stored in NVRAM back to factory default values. For example, It typically does not reset the page count, paper tray sizes, localization language, or formatter number. To reset all variables, see “NVRAM initializer” on page 209.

To perform a cold reset

- 1 Turn the printer off.
- 2 Press and hold down the **Go** button.
- 3 Turn the printer on and continue to hold the **Go** button
- 4 After the Go, Attention, and Ready LEDs turn on, continue holding the **Go** button for approximately five seconds, but not longer than fifteen seconds. During this process, the Attention LED will turn off.
- 5 Release the **Go** button.

Note

If either the Go or Ready LED turned off or no LEDs turned off before the **Go** button was released, then repeat steps 1 through 5.

- 6 The printer LEDs will begin cycling from front to back. The cold-reset process runs until the printer is in the Ready state.

NVRAM initializer

NVRAM initializer sets all default variables stored in NVRAM back to factory default values or to a default ROM value, depending on the variable. It also performs a system reset.

NVRAM initializer resets the following:

- all menu settings to factory default values
- factory settings such as formatter number, page counts, factory paper settings

To perform a NVRAM init

- 1 Turn the printer off.
- 2 Press and hold the **Go** button.
- 3 Turn the printer on and continue to hold the **Go** button.
- 4 After the Go, Ready, and Attention LEDs turn on, continue holding for at least 20 seconds. During this process, the Attention, Ready, and Go LEDs will each turn off.
- 5 Release the **Go** button.
- 6 The device LEDs will begin cycling from front to back. The NVRAM-init process runs until the printer is in the Ready state.

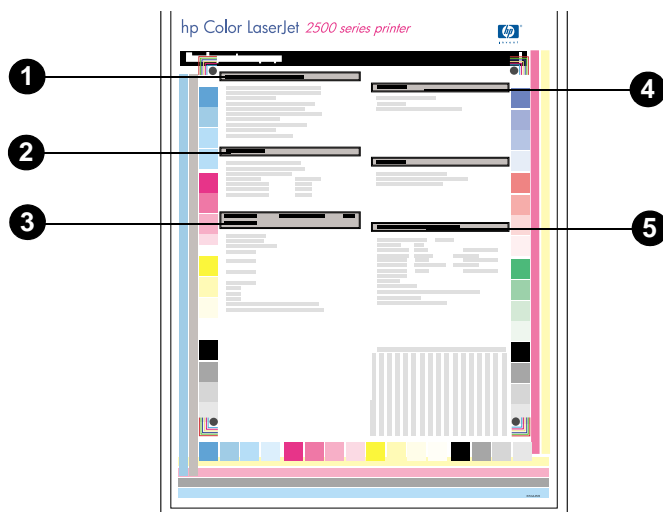

Troubleshooting tools

Demo page

To print the Demo page, press  (Go) when the printer is Ready (Ready light on) and is not printing. You can also view this page from the HP Color LaserJet 2500 Series Toolbox.

Configuration page

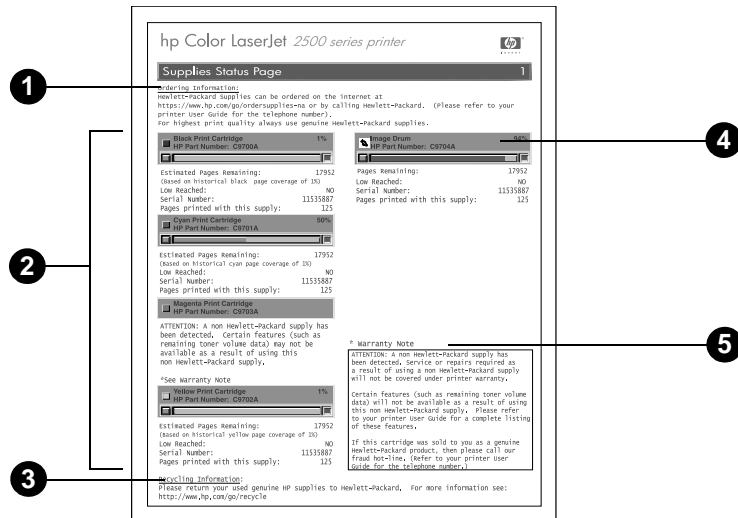

The Configuration page lists current settings and properties of the printer. You can print a Configuration page at the printer control panel, in the embedded Web server, or from the HP Color LaserJet 2500 Series Toolbox. To print the Configuration page from the printer, press  (Go) and  (CANCEL JOB) simultaneously. (The Supplies Status page also prints. If you have an HP Jetdirect print server card installed, the HP Jetdirect page listing the HP Jetdirect information prints as well.)

- 1 **Printer Information.** This section contains basic information about the printer, such as the product name, printer name, and page count.
- 2 **Event Log.** This section contains information about printer errors.
- 3 **Installed personalities and options.** This section contains information about optional items that might be installed, such as DIMMs or an HP Jetdirect print server card.
- 4 **Memory.** This section lists memory-related information, such as the total memory installed.
- 5 **Paper Tray Information.** This section contains information about the trays, such as whether optional trays are installed, and the type and size of paper that might be set for each tray.

Supplies Status page

The Supplies Status page lists the remaining life of HP print cartridges and HP imaging drums. It also lists the estimated number of pages that can be printed with the remaining supplies, number of pages printed, and other supplies information. You can print a Supplies Status page at the printer control panel or from the embedded Web server. To print at the printer, press **(Go)** and **(CANCEL JOB)** simultaneously. (The Configuration page also prints. If you have an HP Jetdirect print server card installed, the HP Jetdirect page listing the HP Jetdirect information prints as well.)

- 1 Ordering Information.** This section contains basic information about how to order new HP supplies.
- 2 Print-cartridge area.** This area contains a section for each of the print cartridges and provides information about HP print cartridges. This information includes the part number for each print cartridge, whether each print cartridge is low, and the life remaining for each print cartridge expressed as a percentage, as a graphic, and as the estimated number of pages remaining. This information is provided only for HP supplies. If a non-HP supply is installed, you see an alert message instead.
- 3 Recycling Information.** This section contains information about the website you can visit for information about recycling.
- 4 Imaging-drum area.** This area contains the same information for the imaging drum that the print-cartridge area provides for the print cartridges.
- 5 Warranty Note.** This section contains information about how the printer warranty is affected when you use non-HP supplies. It also requests that you call the HP fraud hotline if a supply that is being detected as a non-HP supply was sold to you as a genuine HP supply. (See the user guide for information about the HP fraud hotline.)

HP Color LaserJet 2500 Series Toolbox

HP Color LaserJet 2500 Series Toolbox is only supported for Windows 98, NT 4.0, ME, 2000, and XP. You must have performed a complete software installation to use the HP Color LaserJet 2500 Series Toolbox.

You can view the HP Color LaserJet 2500 Series Toolbox when the printer is directly connected to your computer or connected to the network. The HP Color LaserJet 2500 Series Toolbox is a Web page that opens in a Web browser and provides access to the embedded Web server, printer documentation, and printer management and troubleshooting tools.

To use the HP Color LaserJet 2500 Series Toolbox, you must have Microsoft Internet Explorer 4 or later or Netscape Navigator 4 or later. All pages can be printed from the browser.

You do not have to have Internet access to open and use the HP Color LaserJet 2500 Series Toolbox. However, if you click a link in the **Other Links** area, you must have Internet access in order to view the site associated with the link.

To view HP Color LaserJet 2500 Series Toolbox

- 1 Open the HP Color LaserJet 2500 Series Toolbox in one of these ways:
 - On the desktop, double-click the HP Color LaserJet 2500 Series Toolbox icon.
 - On the **Start** menu, point to **Programs**, point to **HP Color LaserJet 2500**, and choose the **HP Color LaserJet 2500 Series Toolbox**.

Note

Once you open the URL, you can bookmark it so that you can return to it quickly in the future.

- 2 The HP Color LaserJet 2500 Series Toolbox opens in a Web browser. The HP Color LaserJet 2500 Series Toolbox software contains these tabs: the **Device** tab, the **Documentation** tab, and the **Troubleshooting** tab. It also contains an area with links to the HP website. See the following sections for more information about each tab or area.

Device tab

The two links on this page, Information and Settings, open the page of the same name from the embedded Web server. To open the embedded Web server and see all of its settings and information, click the picture of the printer in the center of the page. If more than one HP Color LaserJet 2500 printer is connected to the network, you will be prompted to select one. See "Using the embedded Web server" on page 41.

- **Information.** View printer status information. This information comes from the embedded Web server.
- **Settings.** View and change printer settings. This information comes from the embedded Web server.

Documentation tab

This section of the navigation bar contains links to these information sources:

- **Install Notes.** Contains late-breaking information about the printer. In English only.
- **Read Me!** Contains information discovered after other documentation such as the user guide was developed.
- **User Guide - PDF.** Contains the information about the printer usage, warranty, specifications, and support that you are currently reading. This PDF format can be printed by page, chapter, or the entire document, and will be formatted as a traditional book.
- **User Guide - HTML.** Contains the information about the printer usage, warranty, specifications, and support that you are currently reading. This HTML format allows you to easily search for specific topics and jump between topics. Viewable from Windows-based computers only.

Troubleshooting tab

This section of the navigation bar contains links to the information pages of the printer. (Some of these pages are also available from other sources, such as the embedded Web server or the printer itself.) From this section, you can view the following pages:

- **Control Panel Help.** Allows you to view animations of control panel light messages, identify what the light pattern means, and view information for resolving the message.
- **Cleaning Page.** You can clean the print path using this tool. See “Calibrating the printer” on page 54 for instructions.
- **Diagnostic Tools.** These pages can help you resolve problems with color printing tasks and calibrate the printer.
- **Demo pages.** These are additional demonstration pages you can print.

Other links

This section contains links that connect you to the Internet. You must have Internet access in order to use any of these links. If you use a dial-up connection and did not connect when you first opened the HP Color LaserJet 2500 Series Toolbox, you must connect before you can visit these websites. Connecting might require that you close the HP Color LaserJet 2500 Series Toolbox and reopen it.

Connectivity accessories	MPI Tech Bluetooth printer adapter	Go to http://www.hp.com for DIMM availability and ordering

How to use the parts lists and diagrams

The figures in this chapter illustrate the major subassemblies in the printer and their component parts. A table (material list) follows each exploded assembly diagram. Each table lists the reference designator, the associated part number for the item, and a description of the part.

Parts that have no reference designator or part number are not field-replaceable units and cannot be ordered.

While looking for a part number, pay careful attention to the voltage listed in the description column to make sure that the part number selected is for the correct printer model.

This diagram illustrates the exploded view of a mechanical assembly, likely a printer or copier component. The parts are numbered 1 through 24, with additional callouts for specific components and connectors. The assembly includes a main frame (1), a carriage assembly (2, 3), a motor (9, FM712), a fan (J213), a roller assembly (11, 12, 13), a drive mechanism (14, 15, 16, 17, 18, 19, 20, 21, 22), and various connectors (J701, J71, J109, J110, J116, J121, J124, J126, J220, J31, J704, J113, J137, CL1, 501, TH3). The diagram shows the relative positions and assembly sequence of these components.

This exploded view diagram illustrates the assembly of a mechanical component, likely a pump or motor. The diagram includes the following callouts and part identifiers:

- 1**: Points to a bracket or housing component.
- 2**: Points to a large circular component, possibly a motor or pump head.
- 2A**: Points to a sub-assembly or component near the main circular part.
- 3**: Points to a small component, possibly a pin or screw.
- 4**: Points to a long, thin component, possibly a shaft or arm.
- 5**: Points to a small component, possibly a pin or screw.

Other part identifiers shown in the diagram include:

- (J125)
- (J712)
- (PS712)
- (J127)
- (J512F)
- (J511M)
- (J220)
- A
